

Features

- Meets the TIA/EIA- 422-B requirements
- High speed, up to 50Mbps data rate, and t_{PLH} = t_{PHL} = 8 ns typical
- Low pulse distortion, t_{sk(p)} = 0.5 ns Typical
- Wide power supply voltage 3.0V to 5.5V
- High output-drive current: ±30 mA
- Low quiescent supply current: 30 uA typical
- Differential output voltage in 5.0V VCC
 3.9 V typical with 100-Ω Load
- Driver output short protection < 150mA
- Bus-Pin Protection:
 - ±18 kV HBM protection
 - ±9 kV IEC-Contact ESD
 - ±15 kV IEC-Air ESD
- Pb-Free
- Package: SOP16, TSSOP16

Description

3PEAK's TPT4031 is an enhanced RS422 device which meets standard TIA/EIA-422-B with strong ESD protection capability. The BUS-pin can pass \pm 18kV HBM-ESD, and \pm 15 kV IEC-Air ESD protection. It works in wide power supply range: from 3.0V to 5.5V VCC, which provides quad driver for balanced communication. It also features the larger output voltage and higher data rate, the TPT4031 can generate 3.9V differential output with 100- Ω Load and 50Mbps data rate in 5.0V power supply, required by high speed field-bus applications. The device can generate 30mA high output drive current, with short protect function in some abnormal operations, the clamp current is less than 150mA.

The TPT4031's enable functions can control all four drivers and provide an active-high (G) or active-low (/G) enable input, and they provide the high-impedance state in the power-off condition, which only consume 6uA very low current.

The TPT4031 is available in an SOP16, and TSSOP16 package, and is characterized from -40°C to 125°C.

Applications

- Field Transmitters: Temperature Sensors and Pressure Sensors
- Motor Controller/Position Encoder Systems
- Factory Automation
- Industrial/Process Control Networks

Absolute Maximum Ratings

Table 4.

Parameter	Description	Min	Мах	Unit
VCC	Supply voltage	-0.5	7	V
VI	Input voltage	-0.5	VCC + 0.5	V
Vo	Output voltage	-0.5	7	V
Ік	Input or output clamp current		±20	mA
Іок			120	IIIA
ю	Output current		±150	mA
	VCC current		200	mA
	GND current	-200		mA
TJ	Operating virtual junction temperature		150	°C
Tstg	Storage temperature	-65	150	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

(2) This data was taken with the JEDEC low effective thermal conductivity test board.

(3) This data was taken with the JEDEC standard multilayer test boards.

Recommended Operating Conditions

Table 5.

Parameter	Description	Min	Мах	Unit
VCC	Supply voltage	3.0	5.5	V
Viн	High-level input voltage (driver, driver enable)	2	VCC	V
VIL	Low-level input voltage (driver, driver enable)	0	0.8	V
R∟	Differential load resistance	100		Ω
T _A	Operating ambient temperature	-40	125	°C

(1) The algebraic convention, in which the least positive (most negative) limit is designated as minimum is used in this data sheet.

ESD, Electrostatic Discharge Protection

Table 2.

Symbol	Parameter	Condition	Minimum Level	Unit
IEC	IEC Contact Discharge	IEC-61000-4-2, Bus Pin	±9	kV
	IEC Air-Gap Discharge	IEC-61000-4-2, Bus Pin	±15	kV
НВМ	,HBM, per ANSI/ESDA/JEDEC JS-001 / ANSI/ESD STM5.5.1	ANSI/ESDA/JEDEC JS-001, Bus Pin	±18	kV
		ANSI/ESDA/JEDEC JS-001, All Pin Except Bus Pin	±7	kV
CDM	CDM, per ANSI/ESDA/JEDEC JS-002	ANSI/ESDA/JEDEC JS-002, All Pin	±1.5	kV

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

(3) Test at the temperature of 25°CC .temperature

Thermal Information

Table 3.

Package Type	θ _{JA}	θ _{JC}	Unit
16-Pin TSSOP	115	48	°C/W
16-Pin SOP	91	31	°C/W

Note:

(1) Parameter is provided from 1S0P PCB per JEDEC standard.

(2) θ_{JA} , θ_{JC} data is only for reference by design simulation.

Electrical Characteristics

Typical value is in VCC = 5.0V, TA = +25°C, RL = 100 Ω to GND, unless otherwise noted.

Table 4.

Symbol	Parameter	Conditions	Min	Тур	Мах	Unit
Input Electri	cal Specifications

Theory of Operation

Overview

3PEAK's TPT4031 is a quad differential driver, which is designed to meet the requirements of TIA/EIA-422-B, and it usually communicates over the long wires in field bus applications. The TPT4031 have the strong ESD protection capability, the BUS-pin can pass ± 18 kV HBM-ESD, and ± 9 kV IEC-Contact ESD protection. It works in wide power supply range: from 3.0V to 5.5V VCC, which provides quad driver for balanced communication. It also features the larger output voltage and higher data rate, the TPT4031 can generate 3.9V differential output with 100- Ω Load and 50Mbps data rate in 5.0V power supply, required by high speed field-bus applications. The device can generate 30mA high output drive current, with short protect function in some abnormal operations, the clamp current is less than 150mA. In the high-impedance state with power-off condition, TPT4031 only consumes 6uA very low current.

Function block diagram

Figure 4. Function block diagram

Feature Description

Active-High in G and Active-Low in /G

The G and /G logic inputs can configure the device to select transmitter output status, and set a logic high on the G pin or a logic low on the /G pin to enable the device in normal operation mode, and it is easy to configure the logic from a controller or microprocessor.

Power supply

Both the logic and transmitters operate from a single power supply in wide range: $3.0 \sim 5.5$ V, making designs much more easily. The line quad drivers can operate off the same rail as the host controller or a similar low voltage supply, thus simplifying power structure. The 5.0V power supply is recommended to get better performance, especially in high data rate up-to 50Mbps.

Device Functional Modes

Table 12.

Input	Ena	ables	Outputs		
D	G	/G	Y	z	
Н	Н	х	н	L	
L	Н	х	L	Н	
Н	Х	L	н	L	
L	Х	L	L	Н	
Х	L	Н	Z	Z	

Note:

H = High level,

L = Low level,

X = Irrelevant,

Z = High impedance (off)

Application and Implementation

Application Information

A typical system usually contain the drivers, receivers, and transceivers complied with RS-422, to reduce reflections in the transmission line, requires the proper cable termination for highly reliable applications. Only one driver on the bus is allowed per RS422 standard, as termination is used in circuit and it is usually placed at the end of the cable near the last receiver. In order to get the good performance and low cost of the application, and decide the type of termination. The different types of termination are unterminated lines, parallel termination, AC termination, and multipoint termination. For laboratory experiments, around 50 meter of $100-\Omega$, twisted-pair cable, a single driver and receiver, 3PEAK TPT4031 and TPT4032 were tested at room temperature with in 5.0V supply voltage.

Typical Application

Figure 6. Typical application reference circuit

Resistor and capacitor termination values are shown for each lab experiment, but vary from different system. For example, the termination resistor, R_T , must be within 20% of the characteristic impedance, Zo, of the cable and can vary from about 80 Ω to 120 Ω .

Place 0.1µF bypass capacitors is required close to the power-supply pins to reduce errors coupling in from noisy or high impedance power supplies.
