

Operational Amplifier, Rail-to-Rail Output, 3 MHz BW

TLV271, TLV272, NCV272, TLV274, NCV274

The TLV/NCV27x operational amplifiers provide rail-to-rail output operation. The output can swing within 320 mV to the positive rail and 50 mV to the negative rail. This rail-to-rail operation enables the user to make optimal use of the entire supply voltage range while taking advantage of 3 MHz bandwidth. The opamp can operate on supply voltage as low as 2.7 V over the temperature range of -40°C to 125°C . The high bandwidth provides a slew rate of $2.4\text{ V}/\mu\text{s}$ while only consuming $550\text{ }\mu\text{A}$ of quiescent current. Likewise the opamp can run on a supply voltage as high as 16 V (single) and 36 V (dual quad) making it ideal for a broad range of battery-operated applications. Since this is a CMOS device it has high input impedance and low bias currents making it ideal for interfacing to a wide variety of signal sensors. In addition it comes in a variety of compact packages with different pinout styles allowing for use in high-density PCB's.

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

- Continuous short-circuit operation to ground at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output currents in excess of 45 mA over long term may adversely affect reliability. Shorting output to either V+ or V– will adversely affect reliability.

APPLICATIONS

Figure 40. Voltage Reference

Figure 41. Wien Bridge Oscillator

Figure 42. Comparator with Hysteresis

Given: f_o = center frequency
 $A(f_o)$ = gain at center frequency

Choose value f_o, C

Then: $R3 = \frac{Q}{\pi f_o C}$

$$R1 = \frac{R3}{2 A(f_o)}$$

$$R2 = \frac{R1 R3}{4Q^2 R1 - R3}$$

For less than 10% error from operational amplifier,
 $((Q_o f_o)/BW) < 0.1$ where f_o and BW are expressed in Hz.
 If source impedance varies, filter may be preceded with
 voltage follower buffer to stabilize filter parameters.
