RTCS0200

High Precision High Current Alloy Shunt

Resistance	250 $\mu\Omega$ ~375 $\mu\Omega$
Tolerance	$\pm 0.1\%$
Rated Current	200A
Output Voltage	50mV~75mV

Applications

Automotive Electronics
Testing & Measurement
Engineering Machinery
Power Equipment
Energy Storage Equipment

**Better Solution for Sustainable
High End Manufacturing**

Excellent Current Sensing Capability

Low Current Coefficient & Thermal EMF Versus Copper

Introduction

High precision high current alloy shunt is based on a resistive alloy independently developed by C&B Electronics and brazed after precision processing. Based on controlling the consistency of alloy, precision processing, manufacturing process and precision brazing, the product can achieve a current sensing accuracy of 0.1% at a rated current of 10% to 100%. This series of products will undergo 100% power-on testing before delivery, and the data of individual products are traceable.

For a high current shunt, its resistance value and surface temperature will continuously change with loading. The temperature coefficient of resistance and the change in internal structure of the resistor after heating are the main factors causing the change in resistance. When the surface temperature reaches thermal equilibrium, the resistance will stabilize. Based on C&B Electronics' precise control of the ingredient, manufacturing, and heat treatment process of the resistive alloy, this series of products can achieve a temperature coefficient of $\pm 20\text{ppm}/^\circ\text{C}$ within the range of -20°C to $+120^\circ\text{C}$, with low thermal EMF versus copper and current coefficient.

This series, from raw materials, core equipment, to core processes, achieves independent and controllable production, stable quality, and timely delivery. If the standard specifications cannot meet your needs, please contact our sales for consultation. Resi is committed to providing the best precision resistor solutions to meet the needs of customers in automotive electronics, testing and measurement, power equipment, construction machinery, energy storage equipment and other fields.

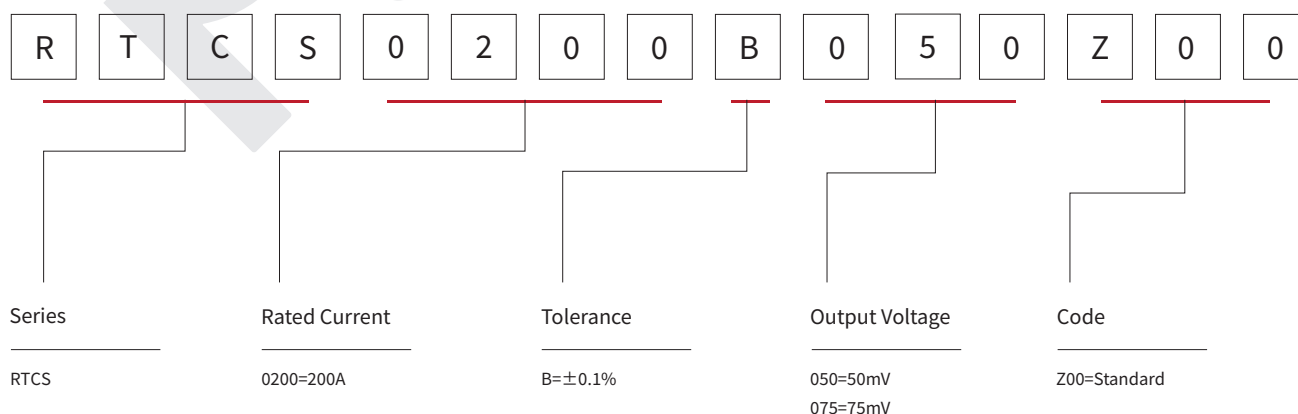

Electrical Parameters

Series	Resistance	Rated Current	Output Voltage	Max. Operating Current	Operating Temperature	TCR ppm/ $^\circ\text{C}$ (+20 $^\circ\text{C}$ Ref)	Weight (g)	Tolerance (%)
RTCS0200	250 $\mu\Omega$	200A	50mV	240A	-55 $^\circ\text{C}$ ~+170 $^\circ\text{C}$	± 20 (-20 $^\circ\text{C}$ ~+120 $^\circ\text{C}$)	310 ± 30	± 0.1
RTCS0200	375 $\mu\Omega$	200A	75mV	240A	-55 $^\circ\text{C}$ ~+170 $^\circ\text{C}$	± 20 (-20 $^\circ\text{C}$ ~+120 $^\circ\text{C}$)	310 ± 30	± 0.1

Part Number Information

Example: RTCS0200B050Z00 (RTCS 200A $\pm 0.1\%$ 50mV Standard)

For higher/lower rated current, higher output voltage, please contact us.

Dimensions

Unit:mm

Performance

Test	Test Method	Standards	Test Result
Basic Tolerance	Load 5%, 10%, 20%, 60%, 80%, 120% rated current for 1 minute.	Q/GDW11850-2018	$\Delta R \leq \pm 0.1\%$
Tolerance Consistency	Load 100% rated current. Measure the consistency of the basic tolerance of three parts in the same lot after thermal balance is reached.	Q/GDW11850-2018	$\Delta R \leq \pm 0.05\%$
Tolerance Stability	Load 100% rated current. Measure the resistance after thermal balance is reached. After the shunt cools to room temperature, power on again at 100% rated current to reach thermal balance. Measure the resistance and calculate the rate of change of the two resistance values.	Q/GDW11850-2018	$\Delta R \leq \pm 0.05\%$
Measurement Repeatability	Load 100% rated current. Measure the resistance every 5s after thermal balance is reached. Record 21 times, and calculate repeatability.	Q/GDW11850-2018	$\Delta R \leq \pm 0.02\%$
Thermal Balance Time	Load 100% rated current. Record the tolerance of the shunt per minute. If the change rate every 1 minute of the shunt tolerance does not exceed 1/10 of the rated shunt tolerance, it is considered that the shunt has reached thermal balance.	Q/GDW11850-2018	$\leq 5\text{min}$
Overload Test	2.25 times rated current for 1.5s	Q/GDW11850-2018	$\Delta R \leq \pm 0.1\%$
Temperature Alternating	No load, 60 °C, 6 cycles	Q/GDW11850-2018 GB/T2423.4	$\Delta R \leq \pm 0.1\%$
High Temperature High Current	70 °C for 30 minutes, and load 100% rated current to reach thermal balance.	Q/GDW11850-2018	$\Delta R \leq \pm 0.1\%$
Low Temperature Low Current	-40 °C for 30 minutes, and load 10% rated current for 1 minute.	Q/GDW11850-2018	$\Delta R \leq \pm 0.1\%$
Drop Test	1000mm, horizontal drop and vertical drop, twice per position	Q/GDW11850-2018 GB/2423.8	$\Delta R \leq \pm 0.05\%$

Storage Instructions

- (1) The shunt shall be stored at a temperature of 5 to 35°C, humidity<60% RH, and the humidity shall be kept at a low level;
- (2) The shunt shall be protected from direct sunlight;
- (3) The shunt shall be stored in a clean and dry environment, free of harmful gases (hydrogen chloride, sulfuric acid, hydrogen sulfur, etc.);
- (4) Special gloves shall be worn for during installation 、 storage and handling to reduce the risk of surface oxidation;
- (5) During installation and storage, do not put heavy objects or apply pressure onto the surface of the shunt alloy to avoid product deformation;
- (6) Under the above conditions, the shunt can be stored for at least 1 year.

Reverse Installation Illustration

Operation Suggestion

- (1) Please pay attention to the surface protection of the product during use to prevent defects such as scratches, bumps, and oil stains on the surface.
- (2) When installing and using the product, it is important to avoid the influence of mechanical stress on the product.
- (3) According to the IEEE standards, the operating current should not be higher than 2/3 of the rated current under the normal conditions.
- (4) Air cooling, water cooling, increased physical size, and installation of heat sinks can be used to reduce operating temperature.
- (5) The surface of the copper bar used for installing the shunt shall be smooth and clean. It is recommended that the surface be plated with nickel or tin to reduce the contact resistance.
- (6) Suggested installation torque: 0.4~0.8 N·m for M3 bolt and 10~15 N·m for M8 bolt.
- (7) During the installation of the shunt, it shall be ensured that the copper head is in close contact with the bus bar, and the contact area between the copper head and the bus bar shall be as large as possible. If conditions permit, the size of the bus bar shall be as large as possible and the bus bar shall be clean.

Curve of the Resistance of Loaded Shunt

*Under different heat dissipation conditions and different applied copper bar sizes, there will be some differences in the change of shunt on resistance. The above operating conditions are under normal temperature with 100mm² copper wire; For customized test, please contact us to provide detailed operating conditions.

Packaging

- (1) Place 1 shunt into an anti-static bag and vacuum seal it. The size of the anti-static bag is 160mm*70mm;
- (2) Wrap the vacuumed product in a bubble bag and place it in a cardboard box. The size of the cardboard box is about 140mm*60mm*50mm;
- (3) It is advised to fill the gaps inside the cardboard box with bubble bags to ensure that the product is not movable;
- (4) Close the cardboard box and tick the product specifications, then attach the product label.
