1. SCOPE

This specification governs the performance of the following pkcell Nickel-Metal Hydride Cylindrical Cell and its stack-up batteries.
pkcell Model: Ni-MH 4/3A4000mAh 1.2V

The data involving nominal voltage and the approximate weight of stake-up batteries shall be equal to the value of the unit cell multiplied by the number of unit cells in the battery.

Nominal voltage of unit cell = 1.2V

4. CONFIGURATION, DIMENSIONS AND MARKINGS

Please refer to the attached drawing.

5. EXTERNAL APPEARANCE

The cell/ battery shall be free from cracks, scars, breakage, rust, Discoloration, leakage nor deformation.

6、CAUTION

◆.Reverse charging is not acceptable

◆.Do not burthen current when charging.

◆.Do not charge/discharge with more than the specified current.

◆.Do not short circuit the cell/ battery. Permanent damage to the cell/ battery may result.

◆. Do not incinerate or mutilate the cell/ battery.

◆.Do not subject batteries to adverse conditions like: extreme temperature, deep cycling and excessive Overcharge/overdischarge.The life expectancy may be reduced.

◆.Store the cell/ battery in a cool dry place. Always discharge the cell/battery before bulk storage or shipment.

◆. Cycle(charge and discharge) the battery every 3-6months to maintain cell/battery performance when being stored for an extended period of time.

◆.Keep away from children. If swallowed, contact a physician at once.

◆. Avoid airtight battery compartments. Ventilation should be provided in the plastic case of batteries, otherwise oxygen and hydrogen gas generated inside can cause explosion when exposed to fire sources such as motors or switches.
