

AC input side

DC output side (NFC Model)

NFC Mode:

- · Auto ranging with ultra-wide charging voltage (10.5~21V, 21~42V, 42~80V, 54~100V; Please refer to page 9 for setting)
- · Built-in CANBus protocol for control, setting and monitoring
- Set up charging parameters easily via NFC interface(NPB-450-xxNFC)
- Programmable charging curve via SBP-001
- · Manual setting for 2/3 stage and 4 built-in charging curves via DIP S.W
- Multiple protections:
  - Short circuit / Over voltage / Over temperature/ Battery under voltage /Battery reverse polarity (No damage)
- · Charger OK and Battery Full signal
- · Temperature compensation function to prolong battery life (Lead-acid only)
- · -30°C ~+70°C wide operating temperature
- · Thermal controlled DC fan for noise reduction
- · Remote ON/OFF control
- · Smart programmer available (Order NO.: SBP-001, sold separately)
- · Carry handle accessory available(Order NO.: Carry handle, sold separately)
- · Comply with 62368-1 + 60335-1/-2-29 dual certification
- · Suitable for lead-acid (Pb) and li-ion batteries
- · 3 years warranty

# Applications

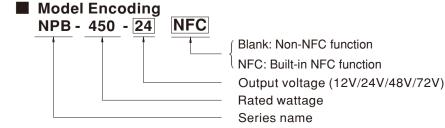

- · AGV
- · E-Bike, E-Scooter, Camping car, Bus, Specialty vehicles
- · Robotic lawn mower
- · Washing robot
- · Recreation craft, Personal yacht or workboat
- · Surveillance system
- · Telecommunication base station
- · Radio system backup solution
- · Equipments or instruments with back-up battery

# Description

NPB-450 is a miniaturized, versatile, and ultra-wide voltage intelligent charger. It utilizes a fully digital control design with automatic battery voltage detection technology, with five key features including intelligent, versatile, user friendly, safe, and compact. The series have four models with output voltage ranges of 10.5~21V, 21~42V, 42~80V, and 54~100V respectively. The charging voltage range of each model is wide enough to cover a variety of different battery voltages and battery chemistries, and there is a built-in intelligent voltage detection charging mode (Note this mode is set to OFF by factory default and is suitable for lithium batteries with BMS only). The NPB-450 can pair with MEAN WELL's SBP-001 programmer for digital configuration or can be accessed through mobile APP with the built-in NFC interface(NFC models), such as select 2/3 stage charging, adjust charging voltage/current, and set charging cycle time to protect battery lifetime. Through the user-friendly DIP S.W. on front panel, user may also directly adjust the 2/3 stage charging, current (50~100%), and select between the 4 types of preset charging curves. In addition, a CANBus communication protocol is built in to meet professional applications, which allows remote controlling and monitoring for the status of the charger. In terms of safety, it has intelligent detection for proper battery voltage and connection as well as protection from reverse polarity. It passes ITE IEC/EN/UL62368-1 and household appliances EN60335-1/-2-29 dual safety(NFC models only pass information IEC/EN/UL62368 safety certification) and 3-year warranty to guarantee reliable operation. The NPB-450 is truly an intelligent, safe, and reliable universal charger with outstanding cost performance.

| NOTE        | 1. Modification for charger specification may be required for different battery specification. Please contact battery vendor and MEAN WELL for details.  2. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.  3. This is the range when programming Vboost or Vfloat by using SBP-001, the smart battery charging programmer.  4. Refer to derating curve.  5. This is MEAN WELL's suggested range. Please consult your battery manufacturer for their suggestions about maximum charging current limitation.  6. Derating may be needed under low input voltages. Please check the derating curve for more details.  7. The efficiency is measured at 16.8V charge voltage(12V model), 33.6V charge voltage(24V model), 67.2V charge voltage(48V model), 84V charge voltage(72V model).  8. This protection mechanism is specified for the case the short circuit occurs after the charger is turned on. |   |  |   |                      |                            |  |  |  |  |  |
|             | Seach model incorporates a     Voltage stage whereas 125     The charger is considered  | MCU-controlled dynamic over volume.  % of Vfloat over Float stage. a component which will be insta                          | oltage protection, which is about 1:<br>alled into a final equipment. - 2. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25 $^\circ \! \mathbb C$  of ambient temperature.
- 3. This is the range when programming Vboost or Vfloat by using SBP-001 or NFC settings through MEAN WELL APP, the smart battery charging programmer. 4. Refer to derating curve.

NOTE

- 5. This is MEAN WELL's suggested range. Please consult your battery manufacturer for their suggestions about maximum charging current limitation.
- 6. Derating may be needed under low input voltages. Please check the derating curve for more details.
- 7. The efficiency is measured at 16.8V charge voltage(12V model), 33.6V charge voltage(24V model), 67.2V charge voltage(48V model), 84V charge voltage(72V model).
- 8. This protection mechanism is specified for the case the short circuit occurs after the charger is turned on.
- 9. Each model incorporates a MCU-controlled dynamic over voltage protection, which is about 125% of Vboost over Constant Current stage and Constant Voltage stage whereas 125% of Vfloat over Float stage.
- 10. The charger is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on https://www.meanwell.com//Upload/PDF/EMI\_statement\_en.pdf )
- 11. The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft). ※ Product Liability Disclaimer: For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx

# ■ Function Manual

| Model Function and Description                | NPB-450-NFC   | NPB-450   |  |  |  |
|---|---|---|--|--|--|
| Configuration and connection before setting   | Communication is possible with or without AC power ON;No communication cable required.  | AC power ON and connect communication cable required.   |  |  |  |
| Set 2 or 3 stage charging                     | Only can set via NFC  | Only can set DIP SW   |  |  |  |
| Set programmable charging curve (CC CV FV TC) | CANBus/SBP-001/NFC  | CANBus/SBP-001  |  |  |  |
| Charging voltage selection                    | According to the voltage requirements of different battery types, 4 preset charging voltages can be selected through DIP S.W.   |   |  |  |  |
| Turn ON or OFF auto ranging mode              | Only can set via NFC  | Only can set DIP SW   |  |  |  |
| CANBus communicate address                    | Only can set via NFC, CANBus can simultaneously connect to NPB-450-NFC up to 16 units for remote monitoring. (Addressable 0~15) | PIN short circuit adjustment, CANBus can simultaneously connect to NPB-450 up to 4 units for remote monitoring. (Addressable 0~3) |  |  |  |

#### **※** Function Description:

SBP-001 is a programmer, particularly for MEAN WELL's various programmable battery charger models to program the parameters of charging curves, such as the 2 or 3 stage selectable, <u>Constant current (CC)</u>, <u>tapper current(TC)</u>, <u>Constant voltage (CV)</u>, <u>float voltage (FV)</u>, <u>Charging time out</u> and so on, to accommodate the diversified battery specification in industry. With the design accounting for simplicity and convenience, users can easily configure MEAN WELL's programmable battery chargers with SBP-001 programmer and the computer; all of the setups are able to be finished easily by the means of the specific software. Note:(1) Tapper current(TC) default is 10%, can be fine tuned from 2% to 30% by SBP-001 with computer or CANBus Interface.

(2) Please contact MEAN WELL for more details.

#### Software Interface:

#### 3. Auto Ranging for Charging (Default non-Auto ranging)

- ※ Function Description:
  - a. NPB-450/NPB-450-xxNFC has built-in auto ranging mode.

    (Note this mode is set to OFF by factory default and is suitable for lithium batteries with BMS only)
  - b. When operating in auto ranging mode, NPB-450 will automatically detect the voltage of battery that is connected and adjust charging voltage accordingly. It will not start charging unit appropriate battery voltage is detected.
  - c. While under auto ranging mode, NPB-450/NPB-450-xxNFC's built-in MCU will adjust charging voltage. There is no potentiometer for voltage adjustment on the front panel.
  - d. While under auto ranging mode, the charging current can be adjusted between 50~100%.

    (The charging current can not be adjusted via potentiometer while not operating in auto ranging mode)

% When using the auto ranging charging curve function, please pay attention to the following:

- (1) Default factory setting is OFF via DC output side DIP S.W, Follow steps A1~A6 below to enable the setting.
- (2) Auto ranging function should use together with Lithium batteries and BMS (Battery Management System).
- (3) Do not exceed the output voltage and current ranges as specified in the NPB-450 specifications (please refer to page 2).
- (4) The NFC models do not require the following operations and can be set directly via the APP.
- \*\* Auto Ranging function by DIP S.W Setting (Please make sure that the battery is lithium battery and must be matched with BMS before using. Auto ranging function is prohibited for non-lithium battery)

| Step | Action   | Note  |
|------|--|---|
| A1   | Set DIP S.W all in the "OFF" position(Default).  | 2 5 2 3 3 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 |
| A2   | Applying AC main and swith on under remote OFF.  | 2 1 1 13 14 13                              |
| A3   | Within 15 seconds , set DIP S.W, all in the "ON" position and all back in the "OFF" again.                   | ON 019                                      |
| A4   | The green LED flashes 3 times means the process is successfully done.  | * * *                                       |
| A5   | Restart the NPB-450 to load smart charging curve setting. (AC input on/off or swith on/off on AC input side) | AC ONPUT AC ON INPUT or                     |
| A6   | Pin 7 & 8 put on jumper.   | 14 13                                       |

#### ※ Back to non-auto ranging as following:

| Step | Action   | Note           |
|------|--|----------------|
| B1   | All DIP switch for charging curve setting are switch to ON position before applying AC main. | 2 2 3 4 5 5 F  |
| B2   | Applying AC main under remote OFF condition.   | 2 1 1 13 14 13 |
| В3   | Switch the DIP switch from all ON to all OFF, and then again, back to all ON in 15 seconds.  | ON DIP         |
| B4   | If LED flashes in GREEN for 3 times, it means the setting is succeeded.                      | * * *          |
| B5   | Remote ON the unit, and it's now back to factory setting.                                    | 14 13          |

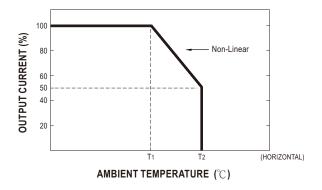

#### 4. Auto Derating function

X Covered by over temperature protection, auto de-rating function works under operation either in charging curve (2 or 3 stage) or under control by communication protocol(CANBus).

T<sub>1</sub>(Typ.): Maximum ambient temperature of 100% output current.

T2(Typ.): T1+5 $^{\circ}$ C .

#### 5.CANBus communication interface

CANBus 2.0B version, Can control, setting and monitoring that including output charging voltage, output charging current, internal temperature and DC output ON/OFF......and so on, please refer to the <u>user manual</u> for more details.

#### CANBus commend list

| Command<br>Code | Command<br>Name                               | Transaction<br>Type | # of data<br>Bytes | Description  |

## 6.Charger OK Signal

Charger OK signal is a TTL level signal.

The maximum sourcing current is 10 mA.

| Between Charger OK (pin 6) and GND-AUX (pin 9 & 10) | Charging Status                          |  |
|---|--|--|
| "High": 4.5 ~ 5.5V                                  | Work normally                            |  |
| "Low": -0.5 ~ 0.5V                                  | Failure or protection function activated |  |

#### 7.Battery Full Signal

Battery full signal is a TTL level signal.

The maximum sourcing current is 10mA.

| Between Battery Full (pin 5) and GND-AUX (pin 9 & 10) | Status       | LED indication |
|---|--------------|----------------|
| "High": 4.5 ~ 5.5V                                    | Battery Full | Green          |
| "Low": -0.5 ~ 0.5V                                    | Charging     | Orange         |

#### 8.Remote ON-OFF Control

The NPB-450 can be turned ON/OFF by using the "Remote Control" function.

| Between Remote ON-OFF (pin 7) and +12Vaux (pin 8) | Status       |
|---|--------------|
| S.W Short (pin 7 = 10.8 ~ 13.2V)                  | ON (Default) |
| S.W Open (pin 7 = -0.5 ~ 0.5V)                    | OFF          |

※ The charger is shipped, by factory default, with Remote ON-OFF(pin 7) and +12Vaux (pin 8) shorted by connector.

#### 9. Temperature compensation (3 stage only)

Temperature compensation function to prolong battery life for lead-acid batteries. Temperature compensation range is  $0 \sim 40^{\circ} \mathrm{C}$  .

The battery temperature sensor comes along with the charger can be connected to the unit to allow temperature compensation of the charging voltage. If the sensor is not used, the charger works normally.

#### 10. DC Output Side LED Indicators & Corresponding Signal at Function Pins

| LED             | Description   |
|-----------------|---|
| Green           | Float (stage 3) or Battery full   |
| Orange          | Charging (stage 1 or stage 2)   |
|                 | Auto ranging for charging   |
| Red             | Abnormal status (OTP, OVP, Short circuit, Reverse polarity, Charging timeout.)  |
|                 | The LED will flash with the red light when the internal temperature reaches 95°C; under this condition, the unit still    |
| Treu (Flashing) | operates normally without entering OTP. (In the meantime, an alarm signal will be sent out through the CANBus interface.) |

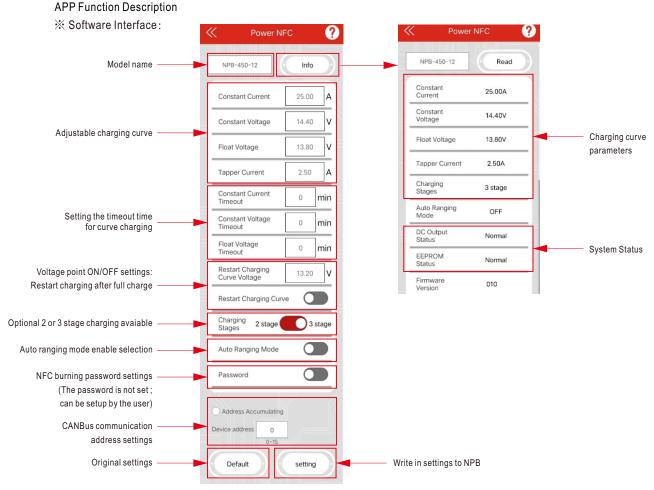

#### ■ Function Manual of NFC Model

- 1. The programmable charging curve of the NFC charger can be set via the mobile APP
  - Instructions:
  - Compatible phones

Install Android ™ NFC compatible intelligent mobile devices or laptops with 4.1 or iOS 12 updates

- NFC setting steps of charging funtion
  - 1. For mobile devices or smart phones, please download the MEAN WELL APP first and activate the NFC function.
  - 2. Please turn on NFC on your mobile device or phone.
  - 3. Please confirm the position of the NFC antenna on your phone first. The phone should be placed close to the NPB-450-xxNFC sensing side board < 5cm.
  - 4. Click on the MEAN WELL APP  $\rightarrow$  top left menu  $\rightarrow$  install the manual/APP  $\rightarrow$  Power NFC, click on the NFC and read it near the NFC sensing position of the charge.
  - 5. After successful induction, the app will display functional parameters, and adjust the relevant parameters according to your needs.
  - 6. After placing the phone antenna near the NFC sensing position of the charger, click on the APP WRITE button to enter the burn mode.
  - 7. After the machine displays successfully, the burning is completed.

Note: After completing steps 1-7 above, repeat steps 3-4 again to read and confirm whether the adjusted charger has truly completed parameter modifications.

Note: :

The communication address range for NFC models is 0-15, and the communication address range for SBP-001 is 0-3.

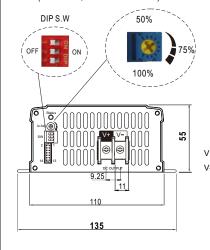

Case No.284A

※ Connector Pin No. Assignment: HRS DF11-14DP or equivalent

| Pin No. | Assignment    | Mating Housing | Terminal      |
|---------|---------------|----------------|---------------|
| 1       | N.C           |                |               |
| 2       | N.C           |                |               |
| 3       | +3.3V         |                |               |
| 4       | GND(Signal)   |                |               |
| 5       | Battery Full  |                |               |
| 6       | Damata ON OFF |                | HRS DF11-**SC |
| 7       |               |                | or equivalent |
| 8       | +12Vaux       | or oquivalent  | 0.040.70.0    |
| 9,10    | GND-AUX       |                |               |
| 11      | CANH          |                |               |
| 12      | CANL          |                |               |
| 13      | NTC(RTH+)     |                |               |
| 14      | NTC(RTH-)     |                |               |

#### **X LED Status Table**

| LED Indicator     | Status   |
|-------------------|--|
| Green             | Float stage (stage 3) or full charged                          |
| Orange            | Charging (stage 1 or stage 2)                                  |
| Orange (Flashing) | Charging with auto ranging function                            |
| Red               | Abnormal (OTP, OVP, short circuit, reverse polarity, time out) |
| Red (Flashing)    | Unit over heated internally                                    |

| Pin No.  | Function  | Description   |
|----------|---|---|
| 1        | N.C   | Notused   |
| 2        | N.C   | Notused   |
| 3        | +3.3V   | +3.3V voltage output, referance to GND(pin 4).  |
| 4        | GND(Signal)   | CANBus interface address lines GND.   |
| 5        | Battery Full  | Battery Full Signal, referenced to GND-AUX(Pin 9 & 10). The Signal is a TTL level signal. The maximum sourcing current is 10mA and only for output.(Note.2) Low (-0.5 ~ 0.5V): When the battery is charging. High (4.5 ~ 5.5V): When the battery is full. |
| 6        | Charger OK Signal, referenced to GND-AUX(Pin 9 & 10). The Signal is a TTL level signal. The maximum sourcing current is 10mA and only for output.(Note.2) Low (-0.5 ~ 0.5V): When the charger fails or the protect function is activating. High (4.5 ~ 5.5V): When the charger is working properly. |   |
| ()N-()FF |   | Remote charger ON/OFF Function. The charger can turn the output ON/OFF by dry contact between Remote ON-OFF and $\pm$ 12V-AUX.(Note.2) Short (10.8 $\pm$ 13.2V): Charger ON; Open (-0.5 $\pm$ 0.5V): Charger OFF; The maximum input voltage is 13.2V.     |
| 8        | +12Vaux   | It is controlled by the Remote ON-OFF control.  |
| 9,10     | GND-AUX   | The signal return is isolated from the output terminal. (+V & -V)   |
| 11       | CANH  | For CANBus model: Data line used in CANBus interface. (Note.2).   |
| 12       | CANL  | For CANBus model: Data line used in CANBus interface. (Note.2).   |
| 13       | NTC(RTH+)   | Temperature sensor(NTC, 5KOhm) comes along with the charger can be connected to the unit to allow temperature   |
| 14       | NTC(RTH-)   | compensation of the charging voltage for lead-acid batteries. Temperature compensation range is $0 \sim 40^{\circ}\text{C}$ (3 stage only).   |

 $Note 1: Non-isolated \ signal, \ referenced \ to \ [GND (signal)].$ 

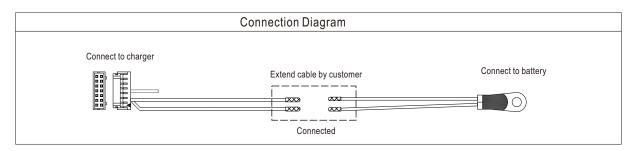

Note2: Isolated signal, referenced to GND-AUX

Note3: NFC models Pin1 and Pin2 are not used, please refer to the actual reading value of the APP for CANBus communication address.

# ■ Accessory List

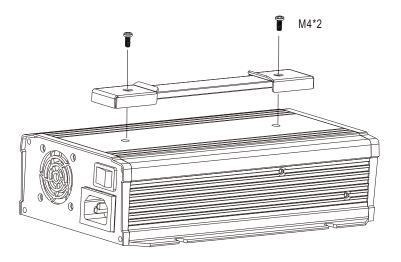

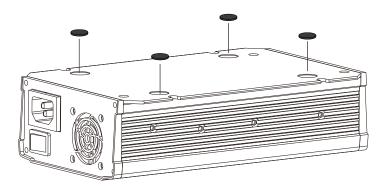

## $\frak{\%}$ Carry handle (Optional accessory, battery charger and pull handle should be ordered seperately)

| MW's Order No. |   | Quantity |   |
|----------------|---|----------|---|
| Carry Handle   | 1 | Handle   | 1 |
|                | 2 | Foot pad | 4 |
|                | 3 | Screw    | 2 |

# 1 Handle

# 2 Foot pad
