Typical characteristics

Typical application

Table 1

Part No.	C1	C2
LOT-06R-X	100µF/35V	22µF/16V

Note:

- 100 µF polymer capacitors (C1) is required and should be connected close to the pin terminal, to ensure the stability of the converter;
- To reduce the output ripple furtherly, increased values and/or tantalum or low ESR electrolytic capacitors may also be used instead;
- Refer to Table 1 for C1 and C2 capacitor values;
- Converter cannot be used for hot swap and with output in parallel.
