The H Series is a line of compact, high-reliability, regulated high voltage power supplies capable of delivering 15W of continuous power at maximum output voltages ranging from 300V up to 6kV. They are programmable from 0 to 100% of rated output voltage via a 0 to 5 volt DAC-compatible high impedance input programming pin. A 0 to 5 volt output voltage monitor is provided.

Standard protection features include input reverse-polarity protection, output short-circuit and arc protection. An aluminum enclosure aids in EMI/RFI reduction. An externally accessible potentiometer provides adjustable gain trim allowing for individual calibration of units. A proprietary encapsulation process and custom high performance potting compound are used to achieve excellent high voltage and thermal properties.

Notes

1. Maximum rated output current is available at maximum rated output voltage.
2. Specifications after 1 hour warm-up, full load, 25°C unless otherwise indicated.
3. Proper thermal management techniques are required to maintain safe case temperature.
4. SET POINT ACCURACY refers to the ability of the unit to accurately deliver the programmed voltage.

5. GAIN ADJUST refers to the ability to alter the gain of the circuit to allow for set-point accuracy error.
6. LINEARITY refers to how much the transfer function can deviate from a straight line in the absence of any set-point error.
