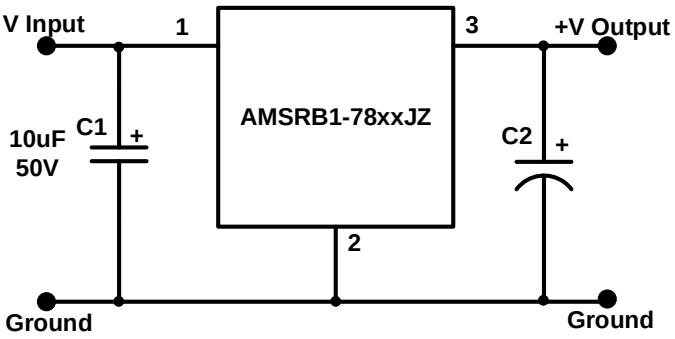
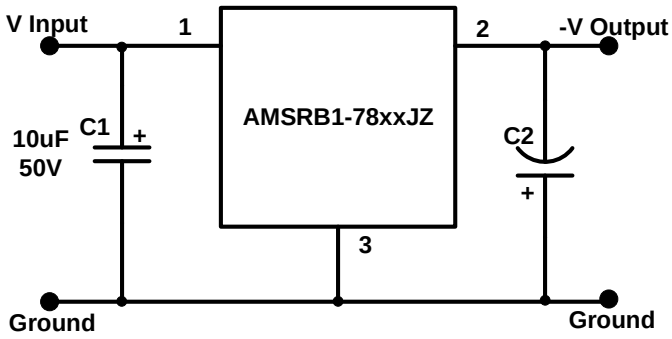
Application Circuit

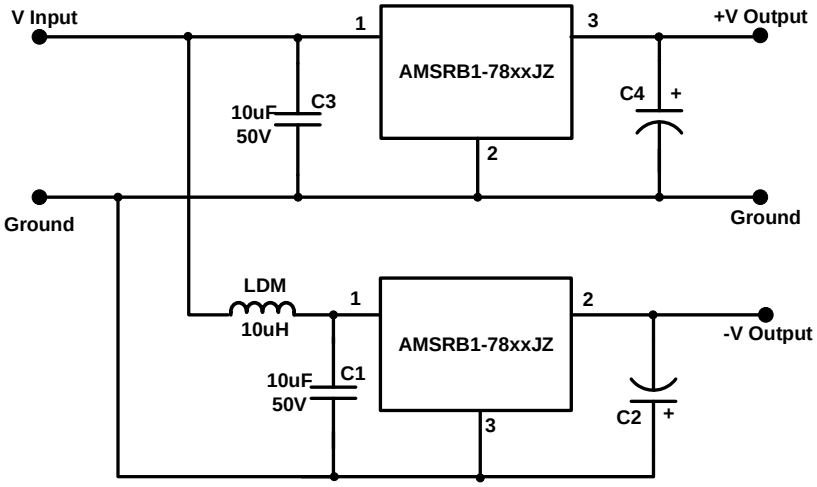
Positive Output Typical Application Circuit



Negative Output Typical Application Circuit



Positive and Negative dual output application circuit



Model	C2/C4 (uF)
3.3/5V output	22uF / 10V
9V output	22uF / 16V
12/15V output	22uF / 25V

It is recommended that tantalum capacitor and aluminum electrolytic capacitor of low ESR capacitors are used for C2.
C1/C3 & C2/C4 are required and should be installed as close to the converter as possible
The converter cannot be used in parallel to enlarge the power for output and hot swap.

EMC Recommended Circuits
