General Description

The Echo 47 is a wideband FPC antenna that operates efficiently from 600 MHz to 6000 MHz.

With an exceptional radiation efficiency of up to 95%, a low VSWR, and a gain of 3-6 dBi, this antenna ensures robust omnidirectional coverage across the most widely-used 5G NR and 4G LTE bands globally.

Made with a flexible polyimide (PI) substrate, etched with precision copper tracks for radiating elements, and backed with an adhesive layer for easy mounting, this ground plane independent antenna can be positioned on both flat and curved surfaces without compromising on RF performance, allowing for versatile placements in applications where mounting flexibility and space optimisation are critical.

Terminated with 100 mm of 1.13 mm coaxial cable, with connector options for I-PEX MHF1 (uFL) or I-PEX MHF4 as standard, the Echo 47 can be customised with other cable and connector types for high volume projects.

NOTE: For each frequency band, Siretta provides a traffic light indication to show the suitability of the antenna for use at that frequency band. Determination of exactly what makes an antenna good or bad at any frequency is subjective.

The view presented is that of Siretta's engineering team having taken into account the efficiency and VSWR measurements. The end user is advised to use their own criteria and/or testing to confirm suitability.

● Suitable band

● Adequate band in good signal conditions

● Likely to be unsuitable

NOTE: For each frequency band, Siretta provides a traffic light indication to show the suitability of the antenna for use at that frequency band. Determination of exactly what makes an antenna good or bad at any frequency is subjective.

The view presented is that of Siretta's engineering team having taken into account the efficiency and VSWR measurements. The end user is advised to use their own criteria and/or testing to confirm suitability.
