

## Features

- High isolation: 39 dB @ 6 GHz
- Low insertion loss: 1.3 dB @ 6 GHz
- Fast switching time of 232 ns
- Power handling of 33 dBm CW
- Logic select (LS) pin provides maximum control logic flexibility
- Terminated all-off state mode
- External V<sub>SS</sub> pin to eliminate spur
- Packaging – 32-lead 5 × 5 × 0.85 mm QFN

## Applications

- Test and measurement
- Wireless applications up to 8 GHz
- Filter bank switching
- RF signal routing

Figure 1 • PE42512 Functional Diagram

## Product Description

The PE42512 is a HaRP™ technology-enhanced absorptive SP12T RF switch that supports a frequency range from 9 kHz to 8 GHz. An external V<sub>SS</sub> pin is available for bypassing the internal negative voltage generator in order for the PE42512 to deliver spur-free performance. It delivers high isolation, low insertion loss, and fast switching time, making this device ideal for filter bank switching and RF signal routing in test and measurement (T&M) and wireless applications up to 8 GHz. No blocking capacitors are required if DC voltage is not present on the RF ports.

The PE42512 is manufactured on pSemi's UltraCMOS® process, a patented advanced form of silicon-on-insulator (SOI) technology.

pSemi's HaRP technology enhancements deliver high linearity and excellent harmonics performance. It is an innovative feature of the UltraCMOS process, offering the performance of GaAs with the economy and integration of conventional CMOS.

## Optional External V<sub>SS</sub>

For proper operation, the V<sub>SS\_EXT</sub> pin must be grounded or tied to the V<sub>SS</sub> voltage specified in **Table 2**. When the V<sub>SS\_EXT</sub> pin is grounded, FETs in the switch are biased with an internal negative voltage generator. For applica-

tions that require the lowest possible spur performance,  $V_{SS\_EXT}$  can be applied externally to bypass the internal negative voltage generator.

## Absolute Maximum Ratings

Exceeding absolute maximum ratings listed in **Table 1** may cause permanent damage. Operation should be restricted to the limits in **Table 2**. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

### ESD Precautions

When handling this UltraCMOS device, observe the same precautions as with any other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified in **Table 1**.

### Latch-up Immunity

Unlike conventional CMOS devices, UltraCMOS devices are immune to latch-up.

**Table 1 • Absolute Maximum Ratings for PE42512**

| Parameter/Condition  | Min  | Max          | Unit |
|--|------|--------------|------|
| Supply voltage, $V_{DD}$   | -0.3 | 5.5          | V    |
| Digital input voltage (V1, V2, V3, V4, LS)                         | -0.3 | 3.6          | V    |
| RF input power (RFC–RFX, 50Ω)                                      |      | See Figure 2 | dBm  |
| RF input power into terminated ports, CW <sup>(1)</sup> (RFX, 50Ω) |      | See Figure 2 | dBm  |
| Maximum junction temperature                                       |      | +150         | °C   |
| Storage temperature range  | -65  | +150         | °C   |
| ESD voltage HBM, all pins <sup>(2)</sup>                           |      | 1000         | V    |
| ESD voltage CDM, all pins <sup>(3)</sup>                           |      | 1000         | V    |

**Notes:**

- 1) 100% duty cycle, all bands, 50Ω.
- 2) Human body model (MIL-STD 883 Method 3015).
- 3) Charged device model (JEDEC JESD22-C101).

## Recommended Operating Conditions

Table 2 lists the recommended operating conditions for the PE42512. Devices should not be operated outside the recommended operating conditions listed below.

**Table 2 ■ Recommended Operating Conditions for PE42512**

| Parameter   | Min  | Typ  | Max          | Unit    |
|---|------|------|--------------|---------|
| <b>Normal mode (<math>V_{SS\_EXT} = 0V</math>)<sup>(1)</sup></b>  |      |      |              |         |
| Supply voltage, $V_{DD}$  | 2.3  | 3.3  | 5.5          | V       |
| Supply current, $I_{DD}$  |      | 120  | 200          | $\mu A$ |
| <b>Bypass mode (<math>V_{SS\_EXT} = -3.0V</math>)<sup>(2)</sup></b>   |      |      |              |         |
| Supply voltage, $V_{DD}$<br>(Table 3 spec. compliance applies for $V_{DD} \geq 3.4V$ )                                      | 3.1  | 3.4  | 5.5          | V       |
| Supply current, $I_{DD}$  |      | 80   | 160          | $\mu A$ |
| Negative supply voltage, $V_{SS\_EXT}$  | -3.3 | -3.0 | -2.7         | V       |
| Negative supply current, $I_{SS}$   | -40  | -16  |              | $\mu A$ |
| <b>Normal or Bypass mode</b>  |      |      |              |         |
| Digital input high (V1, V2, V3, V4, LS)   | 1.17 |      | 3.6          | V       |
| Digital input low (V1, V2, V3, V4, LS)  | -0.3 |      | 0.6          | V       |
| Digital input current<br>V1, V2, V3, V4<br>LS   |      |      | 5<br>10      | $\mu A$ |
| RF input power, CW (RFC–RFX) <sup>(3)</sup>   |      |      | See Figure 2 | dBm     |
| RF input power, pulsed (RFC–RFX) <sup>(4)</sup>   |      |      | See Figure 2 | dBm     |
| RF input power into terminated ports, CW (RFX) <sup>(3)</sup>   |      |      | See Figure 2 | dBm     |
| Operating temperature range   | -40  | +25  | +105         | °C      |
| <b>Notes:</b>   |      |      |              |         |
| 1) Normal mode: connect $V_{SS\_EXT}$ (pin 10) to GND ( $V_{SS\_EXT} = 0V$ ) to enable internal negative voltage generator. |      |      |              |         |
| 2) Bypass mode: use $V_{SS\_EXT}$ (pin 10) to bypass and disable internal negative voltage generator.                       |      |      |              |         |
| 3) 100% duty cycle, all bands, 50Ω.   |      |      |              |         |
| 4) Pulsed, 5% duty cycle of 4620 µs period, 50Ω.  |      |      |              |         |

## Electrical Specifications

Table 3 provides the PE42512 key electrical specifications at +25 °C ( $Z_S = Z_L = 50\Omega$ ), unless otherwise specified. Normal mode<sup>(1)</sup> is at  $V_{DD} = 3.3V$  and  $V_{SS\_EXT} = 0V$ . Bypass mode<sup>(2)</sup> is at  $V_{DD} = 3.4V$  and  $V_{SS\_EXT} = -3.0V$ .

Table 3 • PE42512 Electrical Specifications

| Parameter                     | Path       | Condition     | Min   | Typ | Max   | Unit     |
|-------------------------------|------------|---------------|-------|-----|-------|----------|
| Operating frequency           |            |               | 9 kHz |     | 8 GHz | As shown |
| Insertion loss <sup>(3)</sup> | RFC–RF1/12 | 9 kHz–100 MHz |       | 0.7 | 0.9   | dB       |
|                               |            | 100 MHz–1 GHz |       | 0.8 | 1.0   | dB       |

Notes:

- 1) Normal mode: connect V<sub>SS\_EXT</sub> (pin 10) to GND (V<sub>SS\_EXT</sub> = 0V) to enable internal negative voltage generator.
- 2) Bypass mode: use V<sub>SS\_EXT</sub> (pin 10) to bypass and disable internal negative voltage generator.
- 3) Insertion loss and isolation performance can be improved by a good RF ground on the LS pin (pin 32).
- 4) Defined with S-parameters, relative insertion phase (RFX–RF1) =  $\angle S_{(x+1)1} - \angle S_{21}$ , where incident Port-1 is RFC, response Port-2 = RF1, and response Port-(x+1) = RFx.
- 5) The input 1dB and 0.1dB compression points are linearity figures of merit. Refer to Table 2 for the RF input power (50Ω).

## Switching Frequency

The PE42512 has a maximum 25 kHz switching frequency in normal mode (pin 10 tied to ground). A faster switching frequency is available in bypass mode (pin 10 tied to V<sub>SS\_EXT</sub>). The rate at which the PE42512 can be switched is then limited to the switching time as specified in **Table 3**.

Switching frequency describes the time duration between switching events. Switching time is the time duration between the point the control signal reached 50% of the final value and the point the output signal reaches within 10% or 90% of its target value.

## Spur-free Performance

The PE42512 spur fundamental occurs around 5 MHz. Its typical performance in normal mode is -162 dBm/Hz (pin 10 tied to ground), with 45 kHz bandwidth. If spur-free performance is desired, the internal negative voltage generator can be disabled by applying a negative voltage to V<sub>SS\_EXT</sub> (pin 10).

## Hot-Switching Capability

The maximum hot switching capability of the PE42512 is 20 dBm above 100 MHz. Hot switching occurs when RF power is applied while switching between RF ports.

## Thermal Data

Psi-JT ( $\Psi_{JT}$ ), junction top-of-package, is a thermal metric to estimate junction temperature of a device on the customer application PCB (JEDEC JESD51-2).

$$\Psi_{JT} = (T_J - T_T)/P$$

where

$\Psi_{JT}$  = junction-to-top of package characterization parameter, °C/W

T<sub>J</sub> = die junction temperature, °C

T<sub>T</sub> = package temperature (top surface, in the center), °C

P = power dissipated by device, Watts

*Table 4 • Thermal Data for PE42512*

| Parameter  | Typ | Unit |
|--|-----|------|
| $\Psi_{JT}$  | 20  | °C/W |
| $\Theta_{JA}$ , junction-to-ambient thermal resistance | 58  | °C/W |

## Control Logic

Table 5 provides the control logic truth table for PE42512.

Table 5 • Truth Table for PE42512

| X <sup>(2)</sup>  | 0  | 0  | 1  | 1  | OFF      | OFF      | OFF      |

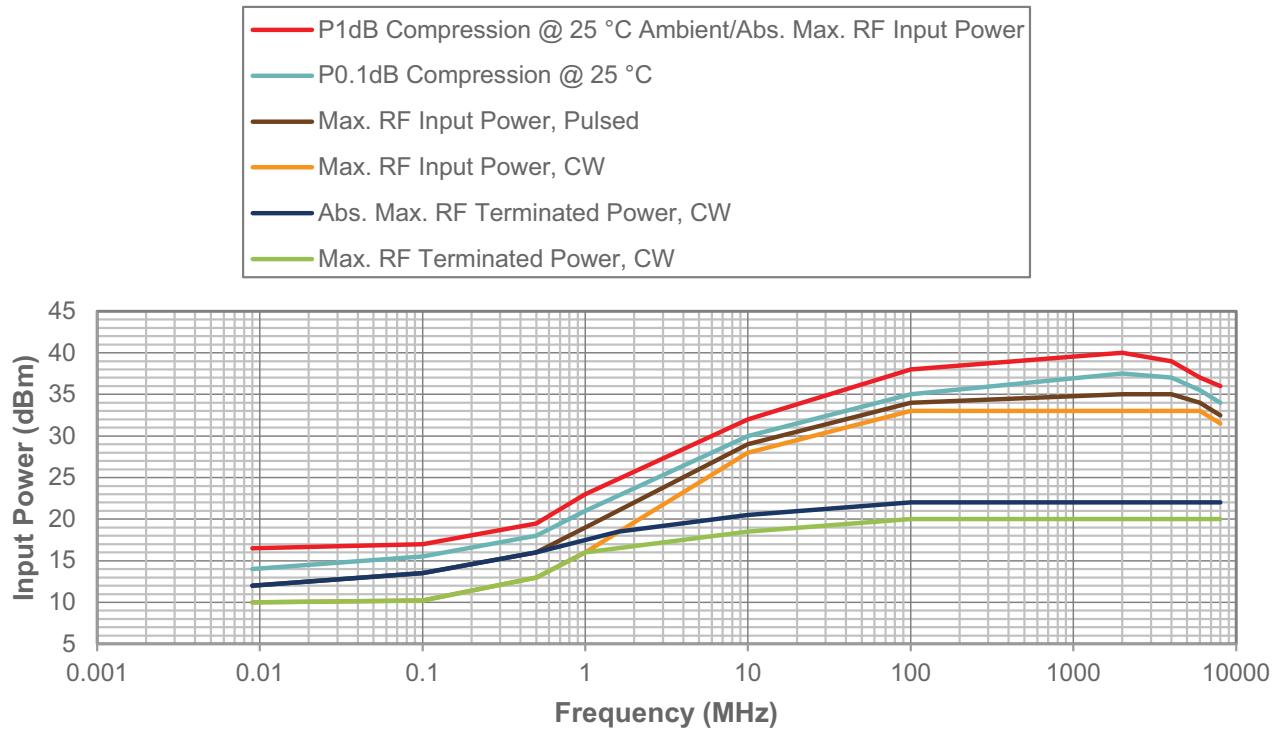

**Notes:**

- 1) LS has an internal 1 MΩ pull-up resistor to logic high. Connect LS to GND externally to generate a logic 0. Leaving LS floating will generate a logic 1.
- 2) LS = don't care, V4 = 0, V3 = 0, V2 = V1 = 1, all ports are terminated to provide an all isolated state.

## Power De-rating Curve

Figure 2 shows the power de-rating curve showing P1dB compression, P0.1dB compression, maximum RF input power (pulsed), maximum RF input power (CW), absolute maximum RF terminated power (CW), and maximum RF terminated power (CW).

Figure 2 • Power De-rating Curve, 9 kHz–8 GHz, –40 °C to +105 °C Ambient, 50?

## Isolation Matrix

**Table 6** provides RFC-to-port isolation and **Table 7** provides port-to-port isolation at +25 °C, V<sub>DD</sub> = 3.3V (Z<sub>S</sub> = Z<sub>L</sub> = 50Ω). Normal mode<sup>(1)</sup> is at V<sub>DD</sub> = 3.3V and V<sub>SS\_EXT</sub> = 0V. Bypass mode<sup>(2)</sup> is at V<sub>DD</sub> = 3.4V and V<sub>SS\_EXT</sub> = -3.0V.

**Table 6 ■ RFC-to-Port Isolation**

| “ON” Port | Frequency     | Isolation (dB) |     |     |     |     |     |     |     |     |      |      |      |

Notes:

- 1) Normal mode: connect V<sub>SS\_EXT</sub> (pin 10) to GND (V<sub>SS\_EXT</sub> = 0V) to enable internal negative voltage generator.
- 2) Bypass mode: use V<sub>SS\_EXT</sub> (pin 10) to bypass and disable internal negative voltage generator.

Table 7 • Port-to-Port Isolation

## Evaluation Kit

The high-throw count RF switch evaluation kit (EVK) includes hardware required to control and evaluate the functionality of the high-throw count switches. The high-throw count RF switch evaluation software can be downloaded at [www.psemi.com](http://www.psemi.com) and requires a PC running Windows® operating system to control the USB interface board. Refer to the *Multi-throw Count RF Switch Evaluation Kit (EVK) User's Manual* for more information.

## Pin Information

This section provides pinout information for the PE42512. Figure 22 shows the pin map of this device for the available package. Table 8 provides a description for each pin.

Figure 22 • Pin Configuration (Top View)

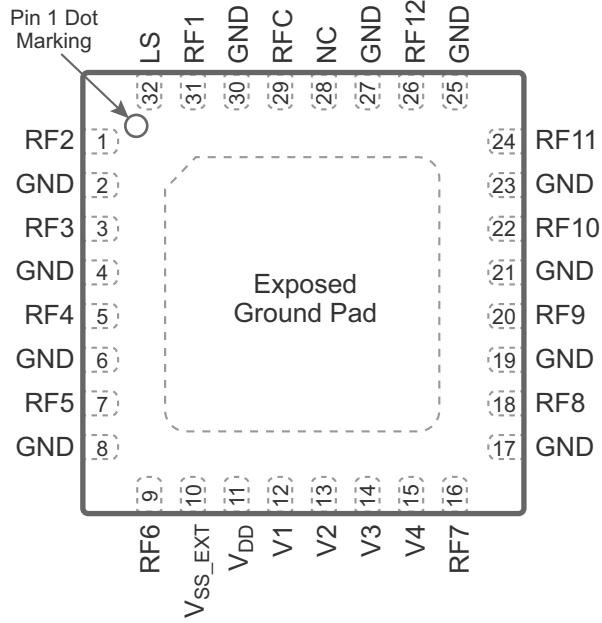

Table 8 • Pin Descriptions for PE42512 (Cont.)

| Pin No. | Pin Name            | Description  |
|---------|---------------------|--|
| 12      | V1                  | Digital control logic input 1  |
| 13      | V2                  | Digital control logic input 2  |
| 14      | V3                  | Digital control logic input 3  |
| 15      | V4                  | Digital control logic input 4  |
| 16      | RF7 <sup>(1)</sup>  | RF port 7  |
| 18      | RF8 <sup>(1)</sup>  | RF port 8  |
| 20      | RF9 <sup>(1)</sup>  | RF port 9  |
| 22      | RF10 <sup>(1)</sup> | RF port 10   |
| 24      | RF11 <sup>(1)</sup> | RF port 11   |
| 26      | RF12 <sup>(1)</sup> | RF port 12   |
| 28      | NC <sup>(3)</sup>   | No connect   |
| 29      | RFC <sup>(1)</sup>  | RF common port   |
| 31      | RF1 <sup>(1)</sup>  | RF port 1  |
| 32      | LS                  | Logic Select—used to determine the definition for V1, V2, V3 and V4 pins |
| Pad     | GND                 | Exposed pad: ground for proper operation                                 |

Notes:

- 1) RF pins 1, 3, 5, 7, 9, 16, 18, 20, 22, 24, 26, 29 and 31 must be at 0 VDC. The RF pins do not require DC blocking capacitors for proper operation if the 0 VDC requirement is met.
- 2) Use V<sub>SS\_EXT</sub> (pin 10) to bypass and disable internal negative voltage generator. Connect V<sub>SS\_EXT</sub> (pin 10) to GND (V<sub>SS\_EXT</sub> = 0V) to enable internal negative voltage generator.
- 3) Pin 28 (NC) can be connected to GND or left not connected externally.

Table 8 • Pin Descriptions for PE42512

| Pin No.   | Pin Name                           | Description                                       |
|---|------------------------------------|---|
| 1   | RF2 <sup>(1)</sup>                 | RF port 2   |
| 2, 4, 6, 8,<br>17, 19, 21,<br>23, 25, 27,<br>30 | GND                                | Ground  |

| 11  | V <sub>DD</sub>                    | Supply voltage (nominal 3.3V)                     |

## Packaging Information

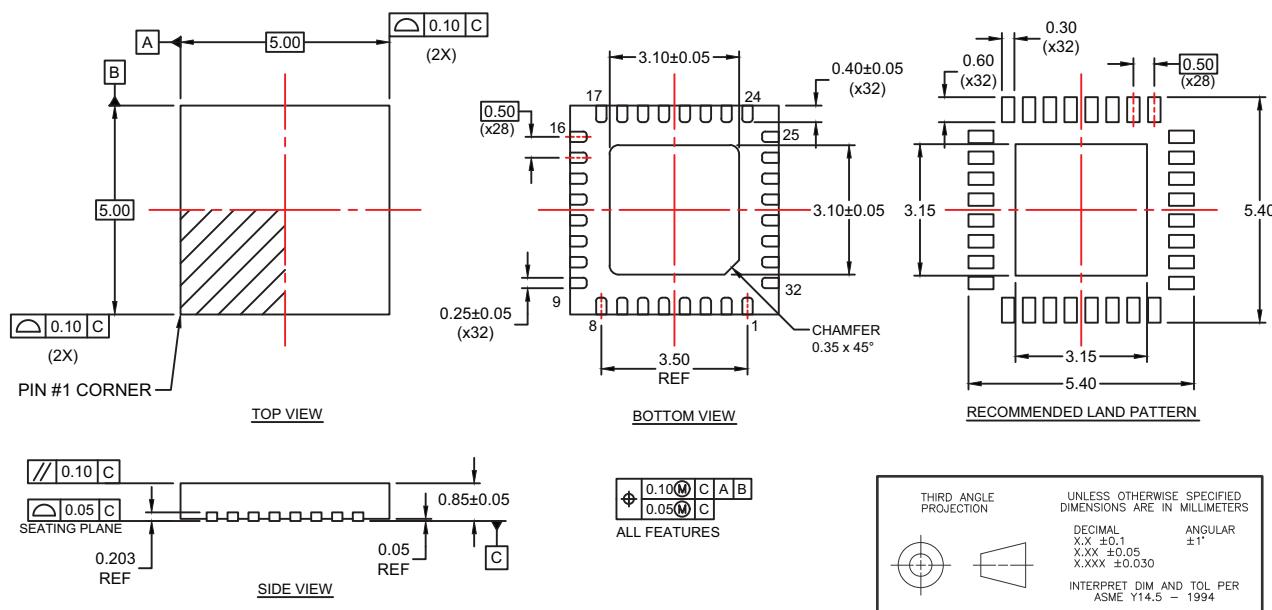

This section provides packaging data including the moisture sensitivity level, package drawing, package marking and tape-and-reel information.

### Moisture Sensitivity Level

The moisture sensitivity level rating for the PE42512 in the 32-lead  $5 \times 5 \times 0.85$  mm QFN package is MSL1.

### Package Drawing

Figure 23 • Package Mechanical Drawing for 32-lead  $5 \times 5 \times 0.85$  mm QFN

### Top-Marking Specification

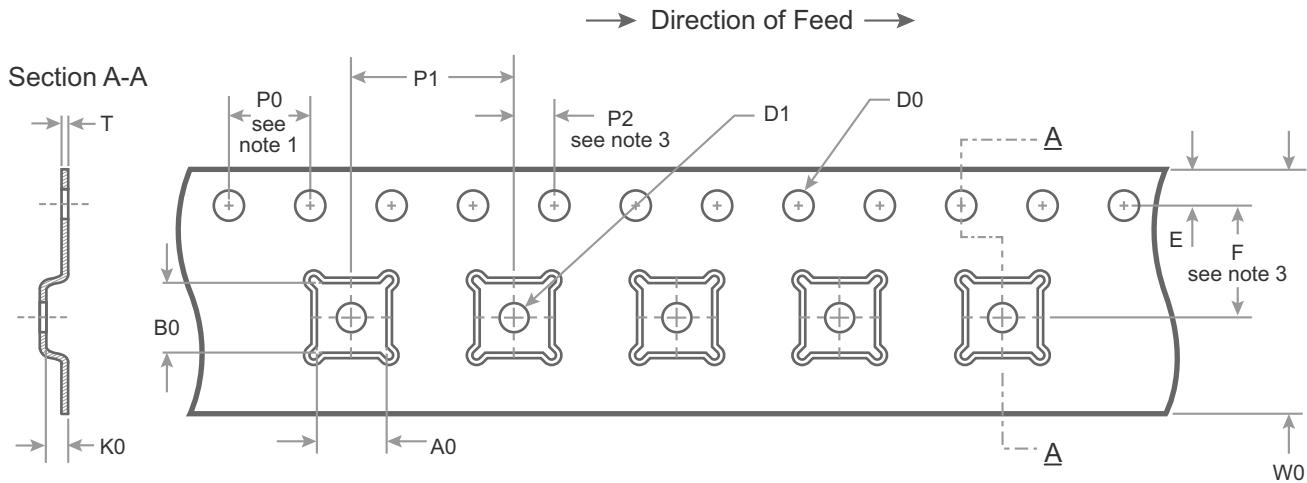

Figure 24 • Package Marking Specifications for PE42512

- = Pin 1 indicator
- YY = Last two digits of assembly year
- WW = Assembly work week
- ZZZZZZZ = Assembly lot code (Maximum seven characters)

## Tape and Reel Specification

Figure 25 • Tape and Reel Specifications for 32-lead 5 × 5 × 0.85 mm QFN

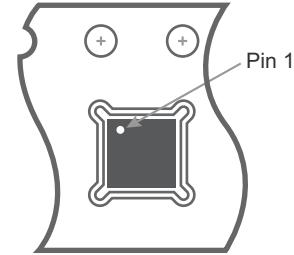

|    |                 |
|----|-----------------|
| A0 | 5.25            |
| B0 | 5.25            |
| K0 | 1.10            |
| D0 | 1.50 + 0.1/-0.0 |
| D1 | 1.5 min         |
| E  | 1.75 ± 0.10     |
| F  | 5.50 ± 0.05     |
| P0 | 4.00            |
| P1 | 8.00            |
| P2 | 2.00 ± 0.05     |
| T  | 0.30 ± 0.05     |
| W0 | 12.00 ± 0.30    |

### Notes:

1. 10 Sprocket hole pitch cumulative tolerance  $\pm 0.2$
2. Camber in compliance with EIA 481
3. Pocket position relative to sprocket hole measured as true position of pocket, not pocket hole

Dimensions are in millimeters unless otherwise specified

Device Orientation in Tape

## Ordering Information

**Table 9** lists the available ordering codes for the PE42512 as well as available shipping methods.

**Table 9 • Order Codes for PE42512**

| Order Codes | Description             | Packaging                  | Shipping Method |
|-------------|-------------------------|----------------------------|-----------------|
| PE42512A-X  | PE42512 SP12T RF switch | Green 32-lead 5 × 5 mm QFN | 500 units/T&R   |
| EK42512-02  | PE42512 Evaluation kit  | Evaluation kit             | 1/Box           |

## Document Categories

### Advance Information

The product is in a formative or design stage. The datasheet contains design target specifications for product development. Specifications and features may change in any manner without notice.

### Preliminary Specification

The datasheet contains preliminary data. Additional data may be added at a later date. pSemi reserves the right to change specifications at any time without notice in order to supply the best possible product.

### Product Specification

The datasheet contains final data. In the event pSemi decides to change the specifications, pSemi will notify customers of the intended changes by issuing a CNF (Customer Notification Form).

### Product Brief

This document contains a shortened version of the datasheet. For the full datasheet, contact [sales@psemi.com](mailto:sales@psemi.com).

### Sales Contact

For additional information, contact Sales at [sales@psemi.com](mailto:sales@psemi.com).

### Disclaimers

The information in this document is believed to be reliable. However, pSemi assumes no liability for the use of this information. Use shall be entirely at the user's own risk. No patent rights or licenses to any circuits described in this document are implied or granted to any third party. pSemi's products are not designed or intended for use in devices or systems intended for surgical implant, or in other applications intended to support or sustain life, or in any application in which the failure of the pSemi product could create a situation in which personal injury or death might occur. pSemi assumes no liability for damages, including consequential or incidental damages, arising out of the use of its products in such applications.

### Patent Statement

pSemi products are protected under one or more of the following U.S. patents: [patents.psemi.com](http://patents.psemi.com)
