At Infineon, we strive to make life smarter, safer and greener, with our sensors being one of the key elements. As a broad-line supplier, Infineon provides the broadest magnetic sensor portfolio in the market, for instance. We are one of the leading sensor suppliers for automotive applications, as demonstrated by the fact that we are No. 1 in many applications such as wheel speed and side airbag pressure sensors, along with radar chips.

As a strong partner for sensor solutions, Infineon draws on 40 years of experience in sensor design and production. We have sold more than five billion integrated magnetic and pressure sensors in the last 10 years, supplying automotive and industrial markets with more than two million sensors per day.

At Infineon, we are committed to making cars safer, smarter and greener with our innovative and leading sensor portfolio. Today, a new car features numerous safety, body and powertrain applications that rely on magnetic sensors. Clearly focused on future trends, our outstanding portfolio of sensor ICs for numerous safety-relevant automotive systems makes cars much safer. In Electric Power Steering (EPS), our magnetic angle sensors and linear Hall sensors are used to measure the steering angle and steering torque.

Since all our newly developed parts are based on an ISO 26262-compliant development flow, we do our utmost

to support our customers' designs in achieving the ASIL classification. This means that they can be deployed directly in all safety-relevant applications – making us a leader in supporting ISO 26262-compliant systems.

Our side airbag pressure sensors, for example, detect the spike in pressure caused by a side impact, thereby triggering the side airbag. These sensors are positioned in the car's door compartments and are regarded as the fastest method of deploying life-saving side airbags. Similar devices are also used in new pedestrian protection systems. These are designed to release a car's hood if it is involved in a collision with a pedestrian, thus reducing the impact for the pedestrian.

Infineon's 77-GHz chips are used in radar-based driver assistance systems – such as adaptive cruise control and collision warning – which recognize objects at a range of up to 250 meters. With 15 million chips already shipped, we are the market leader in radar chips. A radar-based driver assistance system is mandatory in order to achieve the highest rating of five stars from the independent Euro NCAP (European New Car Assessment Program) organization, which reviews the safety of new vehicles sold in Europe.

Sensor ICs for Tire Pressure Monitoring Systems (TPMS) help to boost car safety levels by warning drivers of any loss in tire pressure. These important safety features also

support energy efficiency, as a car with tires that are not fully inflated consumes more fuel and the tires wear down more quickly. Pressure-related downtime is a significant cost factor for operators of commercial vehicles. We offer TPMS sensors covering all tire pressure ranges, making us a leading provider of these safety-critical components for automotive system suppliers.

Wheel speed sensor ICs are faced with an ever-growing list of requirements. Whereas years ago, ABS systems simply needed to know when a wheel was blocked, today the increasing number of modules calls for speed sensors with an array of intelligent functions. Indirect TPMS, for example, uses sophisticated algorithms to determine if a wheel lacks air pressure. Nowadays, every second car worldwide uses our wheel speed sensors.

Modern powertrain systems rely on magnetic speed sensors, along with automotive pressure sensors, to achieve the required CO₂ targets and smart powertrain solutions. Infineon offers a broad variety of magnetic speed sensors for camshaft, crankshaft and transmission applications. Our pressure sensor families for MAP and BAP applications

are especially designed to support the highest requirements in automotive applications, such as optimized fuel consumption or car seats with an increased level of comfort.

The number of industrial and consumer applications that rely on magnetic sensor ICs is also on the rise, further fueling demand for our products. Our products are key components for high-efficiency, smarter and more comfortable operation. Our Hall switches, for example, are regarded as an ideal solution for current commutation in brushless drives (BLDC). Many applications require conventional block commutation – and Hall switches are the perfect fit here. Efficiency levels can be raised even further by directly measuring the rotor angle with our angle sensor family.

Our newly launched innovative 3D magnetic sensor family, with low current consumption and cost-optimized design, specifically addresses the needs of new magnetic sensor applications and is, for example, dedicated to industrial and consumer applications such as control elements, joysticks and E-meters (anti-tampering). Furthermore, it is the ideal fit for low-power 3D magnetic automotive applications such as indicators and gear shifters.

As the technology leader, we provide highly innovative sensor ICs based on an excellent technology portfolio – Hall, AMR, GMR and TMR

We support our customers in achieving the highest ASIL on system level by providing ISO 26262 products and documentation

At Infineon, we focus in particular on sensors for safety applications. These include radars in automatic cruise control systems, wheel speed sensors in ABS and ESP features, pressure sensors in side airbags and pedestrian protection

systems and TPMS sensors. We are the global market leader in most of these areas and our customers value the outstanding levels of quality and reliability that we deliver.

A typical product to system solution – magnetic sensors for highest energy efficiency and functional safety in Electric Power Steering (EPS)

Compared to conventional hydraulic power steering solutions, Electric Power Steering (EPS) enables higher energy efficiency, increased steering functionality and reduced space requirements in passenger vehicles.

The functionality of EPS is based on several system-side position sensors, that measure the steering torque input from the driver, the position of the EPS motor, that moves the steering rack and the steering wheel's absolute position.

Steering torque

BLDC motor

Position sensor applications in EPS are safety-related and typically rated with the highest ASIL-D safety level. The ISO 26262 standard sets high requirements for the diagnostic coverage of random failures and the avoidance of systematic failures in order to reach the highest ASIL-D safety level. These demanding specifications can typically be achieved by using redundant sensors as well as comparing their signals on a microcontroller.

Infineon offers dual-sensor solutions with two redundant sensors in the place of one for all position sensor applications in EPS. Our dual-sensor package integrates two magnetic position sensors with a separate power supply and separate signal outputs. They are electrically independent thanks to galvanic isolation. This means that the two sensors work independently, thereby increasing system reliability.

A typical product to system solution – magnetic sensors for the ultimate in energy efficiency and functional safety in Electric Power Steering (EPS)

Side view of Innovative stack-mounted dual-sensor technology with bonding wires

Transparent 3D-graph of dual-sensor TDSO-16-2 package

Thanks to the use of innovative stack-mounting technology, the devices of the angle sensor family combine two independent sensors within standard and space-saving TDSO packages which are only about 1 mm thick. It has the same width and length as a conventional single-sensor package. Compared to the common approach of side-by-side sensor placement, the advantages of the top-bottom placement

include a more homogeneous magnetic field over the sensing elements and a significantly smaller footprint. This saves precious space and cuts down on expense in safety-critical applications, as a lower-cost ferrite magnet can provide a sufficient magnetic field for the sensors.

Steering torque sensors

In the field of steering torque sensing, Infineon’s TLE499x series offers highly accurate linear Hall sensors for magnetic torque sensing assembly. In order to support a maximum of compatibility with various Electronic Control Unit (ECU)

designs, the TLE499x sensors feature PWM, SENT, SPC or ratiometric analog output. They are available in leaded packages, as well as 1 mm-thick dual- or single-sensor SMD packages.

	<p>TLE4997x</p>	<p>Programmable linear Hall sensor with temperature compensation and ratiometric analog output. Available in a 3- or 4-pin leaded package (with or without integrated capacitors) and an 8-pin dual- or single-sensor SMD package.</p>
	<p>TLE4998x</p>	<p>Programmable linear Hall sensor with digital stress and temperature compensation and PWM, SENT or Short-PWM-Code (SPC) output. Available in a 3- or 4-pin leaded package (with or without integrated capacitors) and an 8-pin dual- or single-sensor SMD package.</p>

Magnetic torque sensing assembly

Conventional EPS systems uses two linear Hall sensors for ASIL-D compliance have to shut-down in the event of a loss of one sensor signal. Therefore, the trend in EPS systems is to increase availability by implementing additional sensor signals or plausibility mechanisms. To support this

trend towards high-availability EPS functionality, Infineon recommends the usage of two TLE4998 dual-sensors. In case of one TLE4998 signal loss, the remaining dual-sensor in the system provides continued operation of the EPS, avoiding an immediate system shut-down.

Application trend: high-availability

Steering angle sensors

The absolute steering angle position is an input for the Electronic Stability Program (ESP) and other driver assistance systems. A typical module design used for steering angle measurement is a design featuring gear

wheels with a slightly different number of gears. The angular positions of the gear wheels are measured by two angle sensors, where the absolute steering wheel position is calculated from those positions via the Vernier principle.

Schematic steering angle sensor module and illustration of the vernier principle

The angle sensors for absolute steering angle measurement are available as a single-sensor SMD package for conventional designs, which achieve the ASIL-D rating via a plausibility calculation of the two angle sensor signals

as a result of a significant movement of the steering wheel. The sensors are also available in dual-sensor packages for module designs, that support an ASIL-D-rated steering angle directly at power-on (ASIL-D from start).

	TLE5009(D)	Fast Giant-Magneto Resistive (GMR) angle sensor with analog sin/cos output. Available in an 8-pin single, 16-pin single- and dual-sensor SMD package.
	TLE5109A16(D)	Fast Anisotropic Magneto Resistive (AMR) angle sensor with analog sin/cos output. Available in an 8-pin single, 16-pin single- and dual-sensor SMD package.
	TLE5014(D)	ISO 26262-compliant (ASIL-C-metric), programmable GMR angle sensor with PWM, SENT or SPC output. Supports Torque-Angle-Sensor (TAS) module bus configuration with TLE4998C. Will be available in a 16-pin single- and dual-sensor SMD package.

Infinion angle sensors support steering angle sensor configurations with an on-board microcontroller, as well as satellite sensor designs, due to a broad variety of supported communication interfaces. In particular, the SPC interface allows the connection of angle sensor(s) and linear Hall

sensor(s) on a bus line in combined Torque-Angle-Sensor (TAS) modules. Compared to conventional designs with separate torque sensor and angle sensor modules, this configuration reduces the cost of wiring and saves module space.

Schematic TAS module set-up and SPC bus configuration of the TLE5014 and TLE4998C

EPS motor position sensors

The motor, that drives the steering rack in an EPS system is usually a highly efficient brushless DC (BLDC) motor, which relies on a fast and accurate position sensor for commutation. In this application, short latency and high

accuracy are essential, as these sensor parameters have a significant impact on torque stability and the energy efficiency of the motor.

Schematic of BLDC motor with a magnetic position sensor for commutation

A correct commutation of the EPS motor has to be ensured, in order to avoid a blocked steering or the erratic steering support. This application is also classified in the category of ASIL-D. To achieve this high level of functional safety, Infineon offers angle sensors in the dual-sensor package that allow the integration of two redundant sensors in the place of one.

The TLE5309D, in particular, meets the highest functional safety requirements by using a combination of AMR (Anisotropic-Magneto-Resistance) and GMR (Giant-Magneto-Resistance) technology, which not just offers redundan-

cy, but also integrated diversity in a single product. Depending on the overall EPS system architecture, the motor position sensor can be directly mounted on the steering ECU, or connected via a cable in a satellite configuration.

The very high level of sensor accuracy required for highest energy efficiency, comparable to the performance of costly resolver solutions, is typically achieved by implementing a continuous calibration algorithm on the steering ECU. By monitoring the sensors output signals and calculating the compensation parameters during operation, this algorithm compensates any drift errors that occur over temperature and lifetime.

	TLE5009A16(D)	Fast dual-GMR angle sensor with analog sin/cos output to support on-ECU designs. Available in a 16-pin dual-sensor SMD package.
	TLE5109A16(D)	Fast dual-AMR angle sensor with analog sin/cos output to support on ECU designs. Available in a 16-pin dual-sensor SMD package.
	TLE5309D	Combined AMR and GMR sensor for integrated diversity, featuring fast analog sin/cos output to support on-ECU designs. Available in a 16-pin dual-sensor SMD package.
	TLE5012BD	Digital GMR angle sensor with SPI + incremental encoder interface or Hall switch emulation output to support on-ECU and satellite designs. Available in a 16-pin dual-sensor SMD package.

2-wheeler and all-terrain vehicles

Our broad portfolio of Hall- and GMR-based sensors is ideal for motorcycle, three-wheel and all terrain vehicle applications. These solutions cover the full spectrum from

switching through position measurement to engine and vehicle speed measurement, ABS sensing included.

www.infineon.com/sev

Commercial vehicles

We offer a broad portfolio of highly robust magnetic sensors tailored to the specific needs of commercial vehicles such as trucks or busses. Our Hall and xMR-based sensors were developed for switching functions as well as

position and speed measurement. You are bound to find a dedicated solution for the individual body, powertrain and safety system of your commercial vehicle.

Sensors in industrial applications

Switches	Linear Hall	Angle sensors	Current sensors	Speed sensors	Pressure	3D magnetic sensors
----------	-------------	---------------	-----------------	---------------	----------	---------------------

We develop sensors for a wide range of industrial applications, including renewable energy, industrial automation and e-mobility. Our portfolio includes products such as magnetic position and speed sensors as well as integrated pressure sensors, current sensors and 3D magnetic sensors.

In the case of electric drives – a key area in industrial applications – our portfolio comprises a full range of energy-saving sensors for electric commutated drives. In the increasingly important solar sector, our current sensors help our customers to achieve optimum system efficiency and meet country-specific regulations.

Sensors for industrial/home applications

Our broad and deep sensor offering provides the perfect fit for various industrial/home applications, including renewable energy, white goods, home automation, drones and power tools. In the home appliances sector, electric commutated BLDC drives are being increasingly used to reduce

overall power consumption. We offer a competitive range of position sensors such as Hall switches and angle sensors for reliable, energy-efficient motor commutation in BLDC drives. Our sensors are also used in applications such as smart metering, solar inverters and sun blinds.

TLE/TLI/TLV49x6 family

High-precision Hall switches

The TLE49x6, TLI49x6, and the TLV49x6 family comprises high-precision, unipolar and bipolar Hall-effect switches and latches for different magnetic sensitivities. TLE/TLI/TLV49x6 products have proven successful in many automotive, industrial and consumer applications. The family also includes two-wire sensors with a current interface.

Features

- › Broad, successful family concept
- › Best in class quality
- › Chopped Hall system for high sensitivity
- › High jitter performance
- › SMD and leaded packages
- › Open collector or current interface
- › Temperature compensation
- › Up to 18 V supply
- › Dedicated products for industrial (TLI49x6) and consumer applications (TLV49x6)
- › AEC-Q100 qualified (option TLE)

Applications

- › Power closing (index counting)
- › Gear stick (position detection)
- › Seat belt (position detection)
- › HVAC flap (position detection)
- › BLDC commutation
- › Two-wheeler applications

TLE/TLI/TLV4961/64/68

Energy-efficient Hall switch family for up to 32 V

The new TLE/TLI/TLV496x-xM/L family of Hall switches saves energy and enables designers to create precise, compact systems. With an operational current consumption of just 1.6 mA, TLE/TLI/TLV496x-xM/L products can cut energy consumption by up to 50 percent compared with similar competitor products. Thanks to its small magnetic hysteresis, the family paves the way for precise switching points in systems. The integrated temperature profile compensates magnetic drifts and enables stable performance overtemperature and lifetime.

TLE/TLI/TLV496x-xM products come in the smallest SOT23 package, thus reducing height by 10 percent compared with predecessor products. The new sensors also feature an integrated functionality test for better system control.

Features

- › Current consumption of just 1.6 mA
- › 3 to 32 V supply voltage range (over voltage up to 42 V)
- › 7 kV ESD protection (HBM)
- › Overtemperature and overcurrent protection
- › Temperature compensation
- › Smallest SOT23 package
- › Dedicated products for industrial applications (TLI496x)
- › AECQ 1W qualified

Applications

- › Window lifter (index counting)
- › Power closing (index counting)
- › Gear stick (position detection)
- › Seat belt (position detection)
- › BLDC (commutation)

TLE/TLI496x-xM

5 V high-precision automotive/industrial Hall-effect sensor

TLE/TLI496x-xM are integrated Hall-effect sensors specially designed for highly accurate applications. The sensors provide an easy-to-use and cost-effective solution for position sensing applications, requiring high temperature stability of the magnetic threshold.

Target applications for TLE/TLI496x-xM are all low-power applications requesting a precision Hall latch or Hall switch with a broad operating temperature range.

By offering an excellent magnetic behavior Infineon's switches are ideally suited for:

- › Index counting application with a pole wheel
- › Rotor position detection (BLDC motors)
- › Open/close detection

Features

- › 3.0 to 5.5 V operating supply voltage
- › Low current consumption 1.4 mA
- › ESD protection 4 kV HBM
- › Active error compensation (chopped)
- › High stability of magnetic thresholds
- › Low jitter (typ. 0.35 μ s)
- › Operating temperature range:
 - from -40 to +170°C (TLE496x-xM)
 - from -40 to +125°C (TLI496x-xM)
- › Small SMD package SOT23
- › TLE: AEC-Q100 qualified
- › TLI: SDEC47 qualified

TLV496x-xTA/B

Precision Hall-effect sensor for consumer applications in leaded package

The TLV496x-xTA/B Hall sensor family comprises a line of Hall switches for contactless position sensing. The sensors are specially designed to provide an easy-to-use and cost-effective solution for position sensing applications.

Features

- > 3.0 to 26 V operating supply voltage
- > Low current consumption 1.6 mA
- > ESD protection 4 kV HBM
- > Operating temperature range from -40 to +125 °C
- > Leaded package TO92S

Applications

- > BLDC motor communication for consumer devices (e.g. e-bikes, fans, aircons)
- > Position detection e.g. flaps and control buttons

TLE4966

Two-in-one double Hall sensor

TLE4966 features two integrated, calibrated sensor elements for detecting direction and counting indexes. This two-in-one feature eliminates the need for a second sensor, which in turn cuts engineering and production costs. Using just one sensor ensures perfect alignment of the sensor elements raising system quality and reliability.

Features

- > Two Hall probes
- > Excellent matching between the two Hall probes
- > Hall plate distance of 1.45 mm
- > Industry standard
- > Outstanding quality
- > Information on direction and speed
- > TSOP6 package
- > AEC-Q100 qualified

Applications

- > Window lifter
- > Sunroof
- > Automatic tailgate and doors

Product	Type	Operating point B_{OP}	Release point B_{RP}	Hysteresis ΔB_{HY}	Automotive	Package
TLE4966K/L	Double Hall, speed and direction output	7.5	-7.5	15	●	TSOP6/SSO-4-1
TLE4966-2K	Double Hall, two independent outputs	7.5	-7.5	15	●	TSOP6

TLE4966V-1K	Vertical double Hall, speed and direction output	2.5	-2.5	5	●	TSOP6

TLE4966V

Vertical dual-Hall sensor

The Infineon vertical double Hall switch TLE4966V-1K is a further development of the TLE4966 family. Completely new is the vertical orientation of the Hall plates resulting in in-plane field sensitivity which enables entirely new application layouts. Designed in a new technology, this device offers high voltage capabilities with very small current consumption. The product can be operated from unregulated power supplies, which offers our customers unique freedom of design for their system. This product is AEC-Q100 certified and enables our customers to build systems for the highest automotive quality requirements.

Features

- > Saves space
- > Easy mounting of sensor and PCB board
- > Allows increased mounting flexibility
- > Enables new, compact system designs

Sensing direction parallel to target to wheel

TLV493D-A1B6/TLI493D-A2B6

3D magnetic sensors for consumer and industrial market

The TLV493D-A1B6 sensor realizes an accurate three-dimensional sensing with extremely low power consumption in a small 6-pin package. Capable of detecting the magnetic field in the x, y, and z-direction, the sensor is ideally suited for the measurement of linear, rotation or 3 dimensional movements. Thanks to its small package and low power consumption, the TLV493D-A1B6 can be used in new applications, replacing potentiometer and optical solutions. Featuring contactless position sensing and high temperature stability of the magnetic threshold, this system concept keeps getting smaller, more accurate and more robust.

Features

- > 3D magnetic sensing
- > Integrated temperature sensing
- > Low current consumption
 - 7 nA in power-down mode
 - 10 μ A in ultra-low power mode
- > 2.3 to 3.5 V operating supply voltage
- > Digital output via a 2-wire standard I²C interface
- > Bx, By and Bz linear field measurement ± 100 to ± 160 mT
- > JESD47 qualified
- > 12-bit data resolution for each measurement direction
- > Various resolution options from 67 μ T/LSB to 134 μ T
- > Operating temperature range up to -40 to +125°C

Product	Temperature range	Qualification	Linear magnetic range	Resolution	I _{DD}	Update rate	Package	Ordering code
TLV493D-A1B6	-40 ... 125°C	JESD47	± 130 mT (typ)	98 μ T/LSB	7 nA – 3.7 mA	10 Hz – 3.3 kHz	TSOP6	SP001286056
TLI493D-A2B6	-40 ... 105°C	JESD47	± 160 mT (min)	134 μ T/LSB (67 μ T/LSB) ¹⁾	7 nA – 3.3 mA	0.04 Hz – 7.8 kHz	TSOP6	coming soon

1) Half range mode

While the TLV493D-A1B6 just supports a typical value for the linear magnetic range of ± 130 mT, the TLI493D-A2B6 specification includes also a minimum value with ± 160 mT.

With the TLI493D-A2B6 a broader microcontroller compatibility as well an enhanced feature set is included.

New features

- > Sensor address read back
- > Half mode range setting, focusing to half of the magnetic range ensuring higher accuracy
- > Higher update frequency allows for an application field that requires faster update speed
- > Angular mode (for x and y read out only)

TLE493D-A1B6/A2B6/W2B6

3D magnetic sensors for automotive low-power applications

The TLE493D-A1B6 enables for all kind of automotive control element applications within the passenger compartment or under the hood with a temperature range of -40 to +125°C with linear magnetic range requirements up to ± 60 mT.

Features

- > 3D magnetic sensing
- > Integrated temperature sensing
- > 2.9 to 3.5 V operating supply voltage
- > Low current consumption
 - 0.007 μ A in power-down mode
 - 10 μ A in ultra-low power mode
 - Up to 10 power modes
- > Digital output via a 2-wire standard I²C interface
- > Bx, By and Bz linear field measurement ± 60 mT to ± 160 mT
- > AEC-Q100 qualified
- > 12-bit data resolution for each measurement direction
- > Various resolution options from 67 μ T/LSB to 134 μ T
- > Operating temperature range up to -40 to +125°C

Product	Temperature range	Qualification	Linear magnetic range	Resolution	I _{DD}	Update rate	Wake-up	Package	Ordering code
TLE493D-A1B6	-40 ... 125°C	AEC-Q100	± 60 mT (min)	130 μ T/LSB	7 nA – 3.3 mA	0.04 Hz – 7.8 kHz	No	TSOP6	SP001368598
TLE493D-A2B6	-40 ... 125°C	AEC-Q100	± 160 mT (min)	134 μ T/LSB (67 μ T/LSB) ¹⁾	7 nA – 3.3 mA	0.04 Hz – 7.8 kHz	No	TSOP6	coming soon
TLE493D-W2B6	-40 ... 125°C	AEC-Q100	± 160 mT (min)	134 μ T/LSB (67 μ T/LSB) ¹⁾	7 nA – 3.3 mA	0.04 Hz – 7.8 kHz	Yes	TSOP6	coming soon

1) Half range mode

The TLE493D-A2B6 features include a high linear magnetic range up to ± 160 mT, a sensor address read back feature for additional communication verification, a half range mode focusing to half of the magnetic range ensuring higher accuracy and an angular mode (for x and y read out only).

With the TLE493D-W2B6 A0-A3, a 3D sensor has been developed, which includes an enhanced dynamic wake up feature. Four pre-programmed address options will be available, enabling for a fast start up initialization, when used in I²C bus configurations. It also includes enhanced test options and a safety documentation is available to enable the usage of this sensor in the context of ASIL-B systems.

TLE499x family

Programmable analog/digital linear Hall sensor family

Infineon's family of TLE499x linear Hall ICs is tailored to the needs of highly accurate angular and linear position detection and current measurement applications. Each product measures the vertical component of a magnetic field and outputs a signal that is directly proportional to the magnetic field. These programmable linear Hall sensors come with different interface options: TLE4997 features ratiometric analog output while TLE4998P comes with Pulse Width Modulation (PWM), TLE4998S with Single Edge Nibble Transmission (SENT) and TLE4998C with Short PWM Codes (SPC). These high-precision 12-bit resolution linear Hall sensors feature EEPROM memory for flexible programming across a wide range of parameters.

Thanks to digital signal processing based on a 20-bit DSP architecture plus digital temperature compensation, these sensors deliver outstanding temperature stability compared with similar compensation methods. TLE4998 also includes stress compensation to withstand stress effects from the package, such as moisture, thus ensuring best-in-class accuracy over the device's lifetime.

Features

- > Best-in-class accuracy with low drift of output signal temperature range lifetime (including stress compensation in TLE4998)
- > Programmable transfer function (gain, offset), clamping, bandwidth and temperature characteristics
- > AEC-Q100 qualified
- > Available in various packages including SSO-3-9 with two integrated capacitors to improve ESD and ESC behavior
- > Dual-die SMD package
- > ISO 26262 ready

Applications

- > Detecting linear and angular position
- > Detecting pedal and throttle position
- > Steering torque measurement
- > Headlight leveling
- > High-current sensing
- > Seat position and occupant detection
- > Suspension control
- > Detecting gear stick/lever positions
- > Detecting liquid levels in fuel tanks
- > Current sensing e.g. for battery management

Product	Programmable	Number of pins	Sensitivity	Magnetic offset	Supply voltage (extended range)	Automotive	Interface	Package

1) More information on PRO-SIL™, see page 54

Two sensors in one SMD package

The new SMD package (TDSO) includes two independent sensors with separate power supply and separate signal outputs. Due to special mounting technology, Infineon is able to keep dual-sensor package size very small to enable compact PCB layouts and small magnet sizes.

Infineon offers a wide range of Hall sensors in the TDSO package. The two sensors in one package offer sensor redundancy in one package. Sensor redundancy is especially interesting for new generation EPS steering systems with increased ISO 26262 requirements and other safety critical applications. All sensors are automotive qualified.

Most products are also available as single-sensor solution with only one sensor.

Features

- > Two sensors in one package
- > Separate power supply and signal output
- > AEC-Q100 qualified
- > Temperature range from -40 to +125°C
- > Outstanding quality
- > Single-sensor versions available
- > 16-pin and 8-pin versions available
- > ISO 26262 ready

Automotive applications

- > Steering torque systems
- > Pedal position
- > Any other safety critical application

Angle sensors

Infineon offers a family of angle sensors based on integrated Magneto Resistive (ixMR) technologies. Technologies include today iGMR and AMR. Infineons iTMR technology is currently under development. The sensors detect the orientation of an applied magnetic field by measuring sine and cosine angle components with monolithically integrated magneto resistive elements. ixMR technology is now widely used in automotive and industrial applications and provides a wide range of benefits.

Low sensitivity to air gap variations: The ixMR element senses a field's direction, not its intensity. Variations in field intensity within the sensor's range therefore have a minimal impact on angle accuracy.

Improved tolerance to misalignment: The area sensitive to ixMR is very small. It is therefore easier to keep it within the homogeneous zone of the magnetic field, in case of a small mechanical failure.

High speed: ixMR technology is extremely fast. Its speed is not limited by the reaction time of the MR element but by delays in the amplifier circuit.

High degree of integration: The data processing and communication interfaces are integrated in the same silicon chip as the sensing elements. This enables compact designs using small outline packages. The angle sensors are available with a wide variety of communication interfaces as well as different levels of data processing and self-testing capabilities, making them ideal for safety-relevant applications in the automotive sector.

iGMR based angle sensors

Infineon's iGMR sensors are ideal for applications with a wide angle range, for example BLDC motor or steering angle sensors. They are pre-calibrated and ready to use. Different levels of signal processing integration enable designers to optimize system partitioning.

TLE 5009/A16(D)

Analog iGMR sensor with temperature compensation

- > Features differential or single-ended analog interface
- > Sine and cosine values
- > Internal temperature drift compensation for gain and offset
- > **Also available as dual-sensor package**
- > ISO 26262 ready

TLE5011

iGMR sensor with digital interface

Features

- > 16-bit representation of sine/cosine values on the interface
- > Bi-directional SSC (SPI-compatible) interface up to 2 Mbit/s
- > Diagnostic function for sensor elements and circuitry with PRO-SIL™ support

1) More information on PRO-SIL™, see page 54

TLE5012B(D)

iGMR sensor with integrated angle calculation and multiple interfaces

Features

- › Integrated angle calculation with CORDIC algorithm
- › 15-bit representation of calculated angle value
- › High update rate up to 43 μ s (23 kHz)
- › Range of selectable interfaces
- › SPI-compatible synchronous serial communication (SSC)
- › Bi-directional communication up to 8 Mbit/s
- › Pulse Width Modulation (PWM)
- › Hall Switch Mode (HSM) for motor commutation
- › Incremental Interface (IIF)
- › Temperature compensation and **auto-calibration** algorithm
- › Diagnostic function for sensor elements and circuitry with PRO-SIL™ support
- › Dual-die SMD package (redundancy)
- › ISO 26262 ready
- › Dual-die package available

Applications

- › Steering angle
- › Brushless DC motor commutation (for example Electric Power Steering (EPS))
- › Rotary switches
- › General angular sensing
- › Incremental or absolute magnetic encoders

TLE5014(D)

Digital iGMR sensor for functional safety applications
ASIL-C(D)

Features

- › Giant Magneto Resistance (GMR)-based principle
- › Integrated magnetic field sensing for angle measurement
- › High voltage and reverse polarity capability
- › EEPROM for storage of configuration (e.g. zero angle) and customer-specific ID
- › 12-bit representation of absolute angle value on the output
- › **Max. 1° angle error** over lifetime and temperature range
- › **Developed according to ISO 26262 with process complying to ASIL-D**
- › Single Point Fault Metrics (SPFM) and Latent Fault Metrics (LFM) meeting ASIL-C requirements
- › Interfaces: PWM, SPC, SENT (based on SAE J2716-2010)
- › 32-point **look-up table** for correcting systematic angle errors (e.g. magnetic circuit)
- › Safety manual and safety analysis summary report available on request
- › Dual die package available
- › ISO 26262 **compliant**

Applications

- › Steering angle sensor
- › Pedal
- › Safety applications

iAMR sensors

Our iAMR sensors are ideal for applications with the highest accuracy requirements. Our iAMR technology offers best performance over temperature, lifetime and magnetic field range. They are pre-calibrated and ready to use.

TLE5109A16(D)

Analog iAMR sensor with temperature compensation

- > Features a differential or single-ended analog interface for sine and cosine values
- > Internal temperature drift compensation for gain and offset
- > Also available as a dual-sensor package
- > ISO 26262 ready
- > Typical 0.1° angle error over lifetime and temperature range after compensation (max 0.5°)

TLE5309D

Diverse iAMR and iGMR sensor with analog interface

Features

- > Differential or single-ended analog interface for sine and cosine values
- > Internal temperature drift compensation for gain and offset
- > Dual-die sensor with **technology diversity**
- > ISO 26262 ready

Applications

- > Contactless angle measurement
- > Steering angle
- > Motor commutation
- > Wiper position
- > Rotational position measurement
- > Safety applications

Magnetic speed sensors

Our Hall- and GMR-based magnetic speed sensors are designed to measure speed in safety and powertrain applications such as speedometers, ABS, camshafts/crankshafts and automatic transmissions. They are also used in similar applications in the industrial sector. The sensors use a ferromagnetic gear tooth or encoder structure to measure linear or rotational speed and position. Hall sensor measuring rotational speed with a gear tooth and a magnetic encoder wheel.

We offer a broad range of options to ensure the perfect fit for individual customer applications, including voltage and current interfaces with optional current detection or vibration suppression. By integrating the magnetic Hall or GMR sensing cell and the signal processing unit on a single chip, we deliver optimum performance and cost savings.

The majority of sensors also feature additional benefits such as integrated capacitors (C- types) for high EMC robustness and the highest levels of ESD protection.

We have an outstanding record of excellence in the automotive sector. Over two billion of our integrated magnetic sensors are installed in cars all over the world, delivering extremely reliable results in safety-relevant applications such as ABS, and in extremely harsh environments such as engines and transmissions.

TLE4921-5U

Highly robust and cost-effective speed sensor

TLE4921-5U is a highly robust and cost-effective solution for measuring speed in a wide range of automotive and industrial applications. This differential Hall sensor delivers outstanding performance while enabling simple, low-cost magnetic circuit designs, making it ideal for all entry-level speed sensing applications.

Features

- > Good sensing performance and high sensitivity
- > Well suited to harsh environments thanks to dynamic offset cancelation, EMI robustness, reverse polarity and overvoltage protection
- > Suitable for a broad temperature range
- > Flexible sensor module interface that can be configured for two-wire and three-wire interfaces
- > AEC-Q100 qualified

Applications

- > Engine speed and position (e.g. crankshaft)
- > Transmission speed
- > Speedometer
- > Industrial speed and position sensing

TLE4922

Highly robust, easy-to-use mono-Hall speed sensor with twist-independent mounting

This sensor is specially designed to provide an easy-to-use, robust and cost-effective solution for vehicle or industrial speed sensing applications. The TLE4922 can therefore be back-biased using a simple, low-cost bulk magnet, while providing a good air gap performance and switching accuracy. Its hidden adaptive hysteresis and calibration algorithm enables good accuracy over air gap jumps and immunity to vibration and run-out events. Thanks to its mono-cell design, the TLE4922 is the perfect choice for applications requiring twist-independent mounting. As a result, the TLE4922 is well suited for replacing passive sensors, such as Variable Reluctance Sensors (VRS), in automotive and 2-wheeler applications by providing the user with higher accuracy and a better jitter performance. The improved EMC, ESD and temperature robustness are perfectly suited for use in the harsh environmental conditions prevalent in automotive or dedicated industrial applications. The TLE4922 comes in a thin 4-pin SSO-4-1 package using a standard 3-wire voltage interface.

Features

- > Large operating air gap capability
- > Twist-independent mounting
- > Hidden adaptive hysteresis
- > Low current consumption

- > Reverse magnetic polarity capability
- > Advanced protection technology
 - Reverse voltage protection at V_S -pin
 - Short-circuit protection
 - Overtemperature protection
- > Wide operating temperature ranges of $-40^{\circ}\text{C} \leq T_j \leq \pm 150^{\circ}\text{C}$
- > High ESD robustness up to ± 4 kV HBM
- > 3-wire PWM voltage interface

Applications

- > 2-wheeler
- > Automotive vehicle speed

TLE4924/26/27/28C

High-performance speed sensor family

Our proven family of TLE492x differential Hall speed sensors is designed for a broad range of speed sensing applications. Each sensor provides the highest levels of quality, robustness and cost efficiency. Thanks to the hysteresis and dynamic selfcalibration algorithm, they are ideally suited to high-performance speed sensing applications in harsh environments, such as automotive engine or transmission applications.

All sensors have a three-wire voltage interface, fast start-up time, symmetrical switching thresholds and optional south or north pole pre-induction.

Features

- › High sensitivity and large operating air gaps
- › Excellent switching performance down to a 1 Hz cut-off frequency
- › Broad operating temperature range
- › High protection against reverse voltage, short circuit and overtemperature
- › Strong EMC robustness and micro-cut performance thanks to module-style package with integrated 47 nF/4.7 nF capacitors
- › Option to use innovative iBB package solution
- › AEC-Q100 qualified

Applications

- › Engine speed and position (i.e. crankshaft)
- › Transmission speed
- › Speedometer
- › Industrial speed and position sensing

Safety first: Infineon Wheel Speed Sensors

Nowadays, wheel speed sensors have to support an ever-growing list of applications. Years ago, ABS systems simply needed to know if a wheel was blocked, and then ESC used the accurate speed of all four wheels for its corrections. Since then, an increasing number of modules in the car take the wheel speed into account for their intelligent functions. The electrical parking brake, for example, needs to know about every inch a car moves when it's supposed to be stationary, and iTPMS uses sophisticated algorithms to determine if a wheel lacks air pressure, and even the central locking locks the doors after a couple of meters and the radio turns up the volume in line with increasing speed. All of the above rely on accurate information from the wheel speed sensor.

Currently, every second car in the world, uses our wheel speed sensors for these vital, safety-relevant tasks – over 1 billion Infineon wheel speed sensors have been sold over the past decade and contributed every day to make people's lives safer.

Features

- > High sensitivity for large air gap applications
- > Differential principle against stray fields and other disturbances
- > Single-chip solution for outstanding reliability
- > Best-in-class slim package sets a global benchmark for the smallest-possible size of the sensor module
- > High resistance against temperature change: No unwanted pulses at thermal drift

Applications

- > Wheel speed sensing in automotive applications
- > Antilock Braking Systems (ABS)
- > Electronic Stability Programs (ESP)
- > Automatic transmissions
- > iTPMS TLE5041plusC, TLE5045iC and TLE5046iC

TLE4941plusC

My car – how fast and how far does it drive?

The TLE4941plusC, our best selling sensor, has become an industry standard for wheel speed sensing.

As a single chip it magnetically measures the cars wheel speed with its differential Hall technology, making it the ideal all-purpose sensor, equally suitable for pole wheel and back bias applications. The TLE4941plusC is immune towards any kind of undesired magnetic stray fields, ferromagnetic particles or other disturbances, because of its differential principle. Based on the latest sensor technologies for front- and back-end systems, the TLE4941plusC will remain a standard for the next years.

Features

- > Suitable for both pole wheels and tooth wheels
- > Hall technology with clear advantages over MR technologies for back-bias wheel speed applications

TLE5041plusC

Are the tires still in good condition?

The latest generations of iTPMS often have higher jitter requirements. In order to meet these requirements, we have developed the TLE5041plusC which has the basic functionality of the TLE4941plusC.

This new sensor uses the GMR effect to sense the wheel speed, as GMR has better jitter than Hall.

Features

- > Best-in-class operating air gap at very low jitter, suitable for iTPMS

Applications

- > Pole wheel applications

TLE5045iC, TLE5046iC

Ready for autonomous driving

The TLE5045/46iC is Infineon's next generation wheel speed sensor family based on GMR technology. The family consists of a designed-to-cost **speed-only** TLE5045iC, and a high-end TLE5046iC providing not only **direction detection** but also offering true "zero-speed" capability as well as possibilities of selfdiagnostics.

TLE5045iC and TLE5046iC are developed according **ISO 26262** to fulfill ASIL-B, supporting ASIL-D systems. The TLE5046iC with direction detection is available with PWM or AK protocol.

Features

- > **One family** of speed sensors for all wheel speed sensing applications in same package
- > **Best in class** in sensitivity, jitter and duty cycle, independent from magnetic target wheel
- > **"Zero speed"** capability
- > **ISO 26262** compliant ASIL-B development, supporting system ASIL-D
- > Multiple **protocol** variants with and without self-diagnosis functionality
- > Integrated circuitry for improved EMC and ESD robustness even without external capacitor

Applications

- > Pole wheel applications
- > Autonomous driving (e.g. park assist)

Overview of wheel speed sensors

Product	Comment	Automotive	Package
TLE4941	Differential sensor for wheel speed	●	SSO-2-1
TLE4941C	As TLE4941 plus integrated capacitor	●	SSO-2-4
TLE4941-1	As TLE4941 plus first-edge detection	●	SSO-2-1
TLE4941-1C	As TLE4941-1 plus integrated capacitor	●	SSO-2-4
TLE4942-1	Includes direction detection, air gap warning and assembly position diagnosis	●	SSO-2-1
TLE4942-1C	As TLE4942-1 plus integrated capacitor	●	SSO-2-4
TLE4941plusC	Successor to the TLE4941 family and current top performer	●	SSO-2-53
TLE5041plusC	Next-generation wheel speed sensor plus improved sensitivity and low jitter	●	SSO-2-53
TLE5045iC	New generation speed-only WSS compliant to ISO 26262	●	SSO-2-1
TLE5046iC	New generation direction detection WSS compliant to ISO 26262	●	SSO-2-1

TLE4953C

The two-wire transmission speed sensor

The differential Hall sensor TLE4953C can detect direction and was developed specifically to meet the needs of high-end transmission applications. Its jitter performance and high sensitivity enables designers to create high-accuracy systems with excellent vibration suppression. Adaptive hysteresis and the dynamic self-calibration algorithm ensure outstanding measurement results with both fine and coarse target wheels. As with other Infineon speed sensors, the south and north poles can be pre-inducted. TLE4953 features a current interface and comes in a two-wire package with an integrated 1.8 nF overmolded capacitor for improved EMI.

Features

- › Detection of rotation direction
- › Highly accurate speed measurements from zero to 12 kHz over large operating air gaps
- › Excellent vibration suppression
- › Broad operating temperature range
- › AEC-Q100 qualified

Applications

- › Automatic transmission systems
- › Industrial speed sensing using current sensor interfaces

TLE4955(C)

Leading the way in vibration robustness

TLE4955 is a new family of differential Hall sensors specifically designed to meet the latest requirements in transmission vibration suppression. Each sensor provides best-in-class vibration suppression for applications, that require a two-wire current interface. The TLE4955 family provides a similar algorithm plus dynamic self-calibration, jitter and sensitivity levels as our proven TLE4953, thus ensuring accurate speed measurements in the harshest of environments for both fine and coarse target wheels.

Designers can choose different interface protocol versions.

Features

- › Detection of rotation direction
- › Best-in-class vibration suppression
- › Highly accurate speed measurements from zero to 12 kHz over large operating air gaps
- › Broad operating temperature range
 - Four different interface protocols
- › AEC-Q100 qualified

Applications

- › Automatic transmission systems
- › Industrial speed sensing using current sensor interfaces

TLE4957C

Three-wire transmission speed sensor

Differential Hall sensor TLE4957 is the ideal choice for designers, who prefer using a three-wire voltage interface rather than a two-wire current interface in applications such as transmission speed sensing. TLE4957 outperforms other devices thanks to its higher Digital Noise Constant (DNC) at start-up and its switching algorithm's increased hysteresis level. It is also available with adaptive hidden or adaptive visible hysteresis. The dynamic self-calibration principle together with the option of south or north pole pre-induction, sophisticated protection technology and optional iBB-package make TLE4957 ideal for automotive and industrial speed sensing applications.

Features

- › Greater robustness against vibration
- › Highly accurate speed measurements from 1 Hz to 8 kHz over large operating air gaps
- › Common three-wire voltage interface
- › Broad operating temperature range
- › Option of using innovative iBB-package solution
- › AEC-Q100 qualified

Applications

- › Automatic transmission systems
- › Engine speed (crankshaft)
- › Industrial speed sensing

TLE4983/84C

Outstanding camshaft sensing

Our TLE4983/84 chopped mono-Hall sensor family comprises an excellent dedicated feature set. It is highly robust and is equipped with a module-style package with integrated capacitors. Due combining all these features, its the ideal opportunity for automotive camshaft applications. The product family meets all key camshaft sensor requirements including true power-on, Twist-Independent Mounting (TIM) and high phase accuracy for optimum fuel-injection timing. Both sensors deploy a dynamic self-calibration algorithm with programmable power-on and a dynamic switching point. TLE4984, for example, uses an algorithm, that enables fast threshold adjustments with small step sizes during the pre-calibration phase. This, in turn, allows thresholds to be adjusted very accurately. In contrast, the step sizes used by TLE4983 in the pre-calibration phase are approximately 10 times larger. TLE4983 therefore requires only half of the switching events used by TLE4984 to reach calibration mode. These flexible options give designers the freedom to choose the best start-up concept for individual system requirements.

Features

- › True power-on and high phase accuracy for optimal fuel injection timing
- › Self-calibration algorithm for fast start-up and precise calibration
- › Twist-Independent Mounting (TIM)
- › High temperature operating range and EMC robustness
- › Three-wire digital voltage interface (PWM)
- › AEC-Q100 qualified

Applications

- › Camshaft speed and position sensing

TLE4986C

Leading performance

TLE4986C is the latest chopped mono-Hall sensor for automotive camshaft applications. It meets the most stringent requirements for phase accuracy, true power-on, EMC and temperature robustness. TLE4986C can be programmed to achieve the highest system performance with the widest range of target wheels, thus enabling designers to optimize the costs of a mechanical system, while obtaining the highest phase accuracy and greatest robustness against effects such as run-out. The temperature coefficient of the magnet can also be configured to ensure, that the sensor is adapted to the magnetic back-bias design. As with the TLE4983/84 family, TLE4986C also comes with proven features such as a dynamic self-calibration algorithm and module-style package plus integrated capacitors for optimal micro-break and EMC behavior.

Features

- › True power-on and highest phase accuracy for optimum fuel injection timing
- › Extensive programming options for flexible design of magnetic circuits and optimized performance
- › Self-calibration algorithm for fast start-up and precise calibration
- › Highest temperature operating range and EMC robustness
- › Best-in-class micro-break performance
- › Twist-Independent Mounting (TIM) capability
- › Three-wire digital voltage interface (PWM)
- › AEC-Q100 qualified

Applications

- › Camshaft speed and position sensing

TLE5027C/28C

iGMR-based speed sensor

TLE5027C is the world's first speed sensor solution based on Giant Magneto Resistive (iGMR) technology. It provides a higher air gap and greatly reduced jitter over frequency and temperature performance. All of which puts it ahead of other magnetic sensing technologies and makes it the preferred solution for high-accuracy powertrain speed sensor systems – both today and in the future. TLE5027C can detect the rotation direction of a wheel and transmit this information during the first output pulse, making it the perfect fit for the latest engine systems that use a start-stop feature as well as for automatic transmission applications in the automotive sector. The TLE5028C adds an improved immunity towards ESD and EMC to address the problems, caused by harsh high power environments like from hybrid systems. TLE5027C and TLE5028C are available in our well-established, module-style package with integrated capacitors. It uses a three-wire digital voltage interface (PWM).

Features

- › Outstanding jitter performance thanks to giant magneto resistive technology
- › High sensitivity ($B_{\min} < 1 \text{ mT}$) and large air gap capability
- › Detection and transmission of rotation direction during the first output pulse
- › Three-wire digital voltage interface (PWM)
- › Large frequency range
- › Broad operating temperature range
- › AEC-Q100 qualified
- › Improved EMC and ESD immunity from TLE5028C

Applications

- › Automatic transmission systems
- › Engine speed (crankshaft)

TLI/TLE4970

High-precision current sensor

TLI4970 is a high-precision current sensor for industrial applications, based on our proven Hall technology. The coreless concept significantly reduces footprint compared with existing solutions. TLI4970 is an easy-to-use, fully digital solution, that does not require external calibration or additional parts such as A/D converters, 0 pAmps or reference voltage. It thus significantly reduces overall implementation effort as well as PCB space and cost.

The differential measurement principle integrated in the TLI4970 sensor suppresses interference caused by external magnetic fields. Accordingly, the sensor achieves an extremely low offset of just 25 mA. With conventional current measurement principles, the measuring accuracy is always governed by the ambient conditions (e.g. the temperature).

TLI4970 is more accurate than existing open-loop and comparable to closed-loop systems. It also provides additional functions such as fast overcurrent detection and programmable filter, yet it has a significantly smaller footprint and lower power consumption.

TLI4970 is extremely robust against external magnetic fields thanks to implemented stray field suppression and is also suitable for fast overcurrent detection at a pre-configurable level. This allows the control unit to switch off independently of the main measurement path and protect power consumers from damage.

Features

- > Fully calibrated digital output
- > High accuracy over life time due to on-chip temperature and stress compensation
- > Programmable low-pass filter for measuring current (0–18 kHz)
- > Fast, configurable overcurrent detector (< 1.8 μ s typ.)
- > Inherent magnetic stray field suppression
- > Small package size and weight for SMD mounting

Applications (AC and DC current measurement)

- > Photovoltaic and general purpose inverters
- > Power supplies (SMPS)
- > Battery chargers
- > Lighting applications
- > Electrical drives
- > and many more

1) Total error over lifetime and temperature

Integrated pressure sensor ICs

For automotive and industrial applications

Our pressure sensors are ideal for a wide range of applications in the automotive and industrial sectors. Typical applications in automotive include side airbag, engine control and seat comfort with high quality, highly accurate and ISO 26262 conform products. We offer the ideal portfolio for these systems.

The analog and digital interfaces of our pressure sensors provide customers with a high degree of design flexibility and enable manufacturers to meet evolving market demands.

Our digital interface portfolio ranges from PSI5 for safety products (for example side crash detection and pedestrian protection systems) through SPI for automotive powertrain and body applications (for example Barometric Air Pressure (BAP), fuel vapor and seat comfort systems) to SENT with SPC functionality for upcoming engine management products (for example MAP, turbo MAP (with NTC) and secondary air valves).

Current automotive restraint systems use Infineon's side airbag pressure sensors to fulfill the steadily increasing safety requirements for passenger cars. In this safety-critical application, the pressure sensor is assembled within the car's side doors and provides – within fractions of a second – a digital crash signal to the central airbag unit. Self-diagnosis routines reliable proper operation every time.

As the safety standards for passenger vehicles increase beyond the side airbag for passengers to secure the safety of pedestrians, Infineon's new sensors (KP200 and KP201 for higher operating temperature) allow our customers to get the highest 5 stars evaluation for vehicle safety.

Automotive applications

- > BAP
- > Seat comfort systems
- > Fuel vapor
- > Idle stop
- > Side crash detection
- > Pedestrian impact detection

Industrial applications

- > Industrial and process controls
- > Gas flow
- > Level meter
- > Barometric pressure
- > Altitude compensation systems
- > Weather stations
- > Engine management systems
- > Medical equipment

KP200/KP201/KP204

PSI5 PRO-SIL™ pressure sensor ICs for side crash detection and pedestrian protection

Features

- > Two-wire interface with on-chip current modulator for PSI5 communication
- > Fully PSI5 compliant with support for multiple modes
- > Synchronous or asynchronous data transmission
- > EEPROM for unique ID number, calibration and mode selection
- > Serial service interface for EEPROM programming
- > On-chip voltage regulator
- > Reverse polarity protection
- > Fully AK-LV29 and AK-LV38 compliant
- > Patented online diagnosis for pressure cells and circuitry
- > PRO-SIL™ support in line with IEC 61508 and ISO 26262
- > Green SMD package
- > KP201 qualified for higher operating temperatures up to 125°C
- > KP204 with 4-hole lid supporting insect intrusion protection

1) More information on PRO-SIL™, see page 54

KP23x

Analog Barometric Air Pressure (BAP) sensor IC family

Everybody expects a car, that always acts and performs in the same way- whether driving along a coast or through mountains. As a result of different locations, the composition and the quality of the air around changes. Due to these changes its thus of fundamental importance, that the engine react immediately. Infineon offers various pressure sensors for barometric measurement with different interfaces (analog and digital) and various pressure ranges.

Features

- › Absolute air pressure measurement
- › Excellent accuracy of 1.0 kPa over a large temperature range
- › Ratiometric analog voltage output proportional to the applied pressure
- › Output signal fully compensated across pressure and temperature range
- › Pressure range from 40 to 115 kPa
- › Temperature range from -40 to +125°C
- › Serial service interface
- › Open Bond Detection for supply and GND (OBD)
- › Self-diagnosis routines
- › Inverse polarity protection
- › Green SMD package

KP25x

SPI digital barometric air pressure sensor IC family

Features

- › SPI – digital interface
- › Absolute air pressure measurement
- › Excellent accuracy of 1.0 kPa over a large temperature range
- › Output signal fully compensated across pressure and temperature range
- › Pressure range from 40 to 165 kPa
- › Temperature range from -40 to +125°C
- › Self-diagnosis routines and diagnosis codes
- › Reverse polarity protection
- › Diagnosis checks during operation
- › Green SMD package

Overview of integrated pressure sensor ICs for manifold and barometric air pressure

KP21x/KP22x

Analog manifold air pressure sensor IC family (MAP + turbo MAP)

Powertrain systems have to fulfill the constantly increasing stringent media requirements. Environmental legislation aims to deliver cleaner air by ensuring a steady global decrease in CO₂ emissions. Thanks to their accurate measurement capability, Infineon MAP and turbo MAP products with an analog interface enable engines to meet these requirements.

Features

- › Manifold air pressure measurement – MAP and turbo MAP
- › Excellent accuracy of up to 1.0 kPa over a large temperature range
- › Ratiometric analog voltage output proportional to the applied pressure
- › Output signal fully compensated over pressure and temperature
- › Pressure range from 10 to 400 kPa
- › Temperature range from -40 to +140°C
- › Output clamping (optional)
- › Complete product family available with multiple transfer function
- › Reverse polarity protection
- › Green SMD package

KP275

Media robust MAP sensor with digital interface

Features

- › Media robustness for current automotive requirements
- › Digital interface SENT
- › Excellent accuracy of ± 0.77 percent FFS
- › Green SMD package
- › Temperature range -40 to +170°C
- › Integrated NTC temperature sensor functionality

SP27

Pressure sensor for industrial and automotive applications

The SP27 is a pressure sensor designed for the harshest automotive and industrial environments. Among its unique selling points, the device offers a wide pressure range up to 1300 kPa and a proven sensor technology, which is robust against various media.

It can be used in both wired and battery-supplied applications.

The SP27 is a complete system on package since it integrates a microcontroller with 6 kB flash and several peripherals (such as temperature and voltage sensors on top of the pressure sensor); it requires very few external components.

Its data interface is I²C; but nevertheless, the integrated microcontroller allows the implementation of specific communication protocols such as SPI, SPC, SENT or PWM. The integrated microcontroller is instruction-set compatible with a standard 8051 processor. Integrated on-chip flash memory can be used to store a customer-specific application code, along with its unique ID number and the calibration data for the sensors. Additional on-chip ROM memory is available and includes functions (developed by Infineon) that cover standard tasks used by the application.

The device can be programmed to wake-up at regular intervals via its low-power interval-timer or per an external wake-up source connected to a General Purpose Input/Output (GPIO), thus allowing the application to save energy by spending most of the time in SLEEP mode.

Features

- > Pressure sensor (100 to 1300 kPa)
- > Temperature sensor
- > Embedded 8051 compatible 8-bit microcontroller
- > 6 KB on-chip flash memory
- > 256 Byte RAM
- > Advanced power control/wake-up system to minimize power consumption
- > Ultra-low standby current of < 0.7 μ A
- > Supply voltage range of 1.9 to 3.6 V
- > Operating temperature range of -40 to +125°C
- > DSOSP-14-6 package
- > RoHS compliant, green package

Parameter	Values		Unit	Note/test condition
	Min.	Max.		
Input pressure range	100	500	kPa	T = -40 ... 125°C
Measurement error 100 ... 500 kPa	-21	+21	kPa	T = 25 ... 80°C
	-46	+46	kPa	T = -40 ... 125°C
Input pressure range	500	1300	kPa	T = -40 ... 125°C
Measurement error 500 ... 1300 kPa	-31	+31	kPa	T = 25 ... 80°C
	-60	+60	kPa	T = -40 ... 125°C
Temperature measurement error	-3	+3	°C	T = -20 ... 70°C
	-5	+5	°C	T = -40 ... -20°C T = 70 ... 125°C

DPS310

Digital barometric air pressure sensor

DPS310 is a digital barometric air pressure sensor featuring an ultra-high resolution, high accuracy, low energy consumption and miniature size. DPS310 is specially designed to enable enhanced navigation experience, activity level monitoring, gesture recognition and weather monitoring.

The product provides ultra-high precision up to ± 5 cm and ± 0.06 hPa relative accuracy. The pressure sensing element is based on a unique capacitive principle, which is totally different from piezo-electric technology employed in most of the pressure sensors available in today's market. The capacitive technology enables high accuracy during temperature changes, which is important for smart phones, wearable and personal navigation devices.

Key product features

- > Operating pressure range: 300 to 1200 hPa
- > Operating temperature range: -40 to $+85^{\circ}\text{C}$
- > Pressure level precision: ± 0.006 hPa (or ± 5 cm) (high-precision mode)
- > Pressure sensor relative accuracy: ± 0.06 hPa (or ± 0.5 m)
- > Temperature accuracy: $\pm 0.5^{\circ}\text{C}$
- > Pressure temperature sensitivity: < 0.5 Pa/K
- > Measurement time: Low-power mode: 3 ms
- > Average current consumption: Low power: $3 \mu\text{A}$ (1 measurement/sec.)
- > Standby: $< 1 \mu\text{A}$
- > Supply voltage: V_{DDIO} : 1.2 – 3.6 V, V_{DD} : 1.7 – 3.6 V
- > Operating modes: Command (manual), background (automatic), standby
- > Interface: I²C and SPI (both with optional interrupt)
- > Miniature package 8-pin LGA: 2.0 x 2.5 x 1.0 mm.

Target applications

- > Internet of Things
- > Wearable electronics e.g. health and sports gadgets
- > Indoor navigation floor detection e.g. in shopping malls and parking garages
- > Outdoor navigation in personal navigation devices
- > Dead-reckoning e.g. in tunnels
- > Local weather station

Functional block diagram

DPS310

Digital barometric air pressure sensor

Application benefits

- > Ultra-high precision
- > High measurement accuracy over wide pressure and temperature range
- > Easy implementation due to compact size
- > Low system level energy consumption due to FIFO

Application circuit example (in I²C configuration)

Pin configuration (Top view)

Pin	Name	Function
1	GND	Ground
2	CSB	Chip Select
3	SDI	Serial Data In/Out
4	SCK	Serial Clock
5	SDO	Serial Data Out
6	V _{DDIO}	Digital Interface Supply
7	GND	Ground
8	V _{DD}	Analog Supply

SP37

Tire pressure sensor for Tire Pressure Monitoring Systems (TPMS)

SP37 is a highly integrated device that performs all functions required for a Tire Pressure Monitoring System (TPMS) wheel module. It is ideal for high-volume applications, bundling the sensing elements, microcontroller, LF receiver, RF transmitter and other components in a single package. Only very few external components are required to create a TPMS module.

SP37 measures pressure, radial acceleration, temperature and supply voltage and is certified as a green package compliant with RoHS. SP37 comes in a number of variants with different pressure ranges (100 to 450 kPa, 100 to 900 kPa and 100 to 1300 kPa), making it the ideal choice for light vehicle and heavy truck applications.

Features

- > Pressure sensor
- > Radial acceleration sensor
- > Temperature sensor
- > Supply voltage sensor
- > Embedded 8051 compatible 8-bit microcontroller
- > 6 KB on-chip flash memory
- > 256 Byte RAM
- > 315 and 434 MHz FSK/ASK
- > RF transmitter
- > Output power of 5 or 8 dBm
- > 125 kHz ASK high-sensitivity LF receiver
- > Advanced power control/wake-up system to minimize battery consumption
- > Ultra-low standby current of <math>< 0.7 \mu\text{A}</math>
- > Supply voltage range from 1.9 to 3.6 V
- > Operating temperature range from -40 to +125°C
- > DSOSP-14-6 package
- > RoHS compliant, green package

Product	Pressure range [kPa]	Key benefits
SP370-25-106-0	100–450	> Highest integration
SP370-25-116-0	100–900	> Very low energy consumption
SP370-23-156-0	100–1300	> Robust g- and p- sensor
		> High LF sensitivity

SP37 fully supports all necessary requirements for a Tire Pressure Monitoring System (TPMS)

RASIC™

Front-end ICs for automotive RADARs

Since volume production started in 2009, RASIC™ chips have become the market leader in the 77 GHz SiGe MMIC segment. They can be used in different configurations to build RF front-end modules for sensors in applications such as Long-Range RADARs (LRR – e.g. ACC), Lane Change Assist (LCA) and Blind Spot Detection (BSD) systems as well as in Collision Mitigation (CM) and Emergency Brake Assist (AEB) features. All components are AEC-Q100 qualified and specified over the full -40 to +125°C automotive temperature range.

RTN7735PL transmitter and RRN7745PL/46PL receiver

The RTN7735PL (a three-channel transmitter) and RRN7745PL/46PL (a four-channel receiver) provide a 77 GHz solution in an eWLB package. They form a scalable

platform to build long- and mid-range systems by using multiple receiver components and optional power amplifiers.

RPN7720PL power amplifier in eWLB

The RPN7720PL dual-power amplifier allows an increase in system output power plus additional output switching and phase switching of two Tx channels.

RCC1010 RADAR companion chip in TQFP-48 PGN

The RCC1010 RADAR companion is a CMOS chip, which provides a fully digital interface to PTN7735PL. It features freely programmable modulation waveform generation and PLL frequency control.

BGT24M/L family

Industrial 24GHz mmWave radar

The BGT24M/L family is currently the largest and highest integrated 24GHz radar transceiver family currently in the market, saving ~30 percent board space compared to discrete line ups. Infineon provides a total of four 24GHz industrial radar chips, providing a range of different transmitter and receiver channel configurations, supporting different application requirements.

Applications

- > Building and smart home (IoT)
- > Indoor/outdoor lighting
- > Smart street lighting
- > UAV/multicopter
- > Security
- > Robotics

Key benefits

- > Direction, proximity and speed detection
- > Hidden mounting capability
- > Maintains operation through harsh weather conditions
- > Motion tracking
- > Ghost target suppression
- > Target positioning
- > Adaptable to different application requirements

In addition to the Infineon BGT24M/L family of MMIC chips, Infineon provides a continuously expanding range of evaluation and demo boards to support the testing and development of radar in multiple applications. All boards are provided with base level software to support ease-of-use and faster to market integration.

Our 3rd offering comes in the format of radar modules. Through utilizing our strong network of partners, our radar offering extends to a portfolio of easy to integrate modules, containing the Infineon 24GHz MMIC inside.

IFX MMIC	Evaluation and demo boards	Radar modules
BGT24M/L family	Supporting testing and development	Turnkey modules and design support

BGT24M/L family

24GHz mmWave radar MMIC chips

The Infineon range of 24GHz industrial radar chips provide 4 configurations of transmit and receiver channels ensuring there is a chip to support your specific application. Whether one transmit and one receive channel is enough for applications such as basic motion detection in security, through to more complex speed detection requiring 2 receiver channels, our range supports your needs.

The following features and block diagram are for the BGT24LTR11N16.

For similar level of information on the other MMIC listed above, please visit: www.infineon.com/24GHz

- › 24GHz transceiver MMIC
- › Fully integrated low phase noise VCO
- › Built in temperature compensation circuit for VCO stabilization
- › Low power consumption
- › Fully ESD protected device
- › Single ended RF and IF terminals
- › 200 GHz bipolar SiGe:C technology B7HF200
- › Single supply voltage 3.3 V

Block diagram

Functional safety – ISO 26262

ISO 26262 defines the development of electric and electronic automotive systems with regard to their functional safety. The aim of this standard is to reduce possible hazards caused by the failure and malfunction of such systems. The safety requirements for the development process depend on the ASIL rating of the target application and can range from ASIL-A to ASIL-D. Applications such as steering or braking systems are rated with the highest ASIL-D level. A failure in such a system can lead to an out-of-control vehicle, possibly resulting in fatal injuries.

All newly developed parts, which are addressing a certain safety goal will be based on an ISO 26262-compliant development flow, thereby allowing direct use in all safety-relevant applications. Devices which are developed prior to the ISO 26262 as a QM part can nevertheless be used in ISO-compliant systems as outlined in part 8 clause 13 of the standard. In such cases, it is mandatory “to provide evidence of the suitability of hardware components and parts” for use in ISO-compliant systems and also to provide failure modes, their distribution and diagnostic capability.

To support our customers as they strive to achieve the highest ASIL on system level, Infineon provides both the necessary support for qualification of existing

pre-ISO 26262 products, and fully ISO 26262-compliant products of the future.

For a selected set of existing Infineon sensor ICs, extensive functional safety analyses have been conducted for various application use cases by means of FMEDA (Failure Mode, Effects and Diagnostic Analysis), DFA (Dependent Failure Analysis) and also FTA (Fault-Tree Analysis) to make them “ASIL-ready”. The resulting FIT rates and safety-related judgements of these analyses are summarized in Safety Analysis Summary Reports. These reports are available to customers for interfacing with their system-level safety concept. The preferred implementation of the “ASIL-ready” sensor ICs is described in dedicated safety manuals. Additionally, Infineon offers expert support for system integrators in achieving the required ASIL on system level.

Future Infineon sensor IC developments for safety-related applications will follow the full ISO 26262-compliant process: A V-model based requirements capturing and verification process ensures the fulfillment of ASIL-rated safety requirements. Furthermore, dedicated safety analyses are already performed during development to support the achievement of the required safety targets. The resulting sensor IC can therefore be easily used in safety-related applications.

Infineon PRO-SIL™

The functional complexity and levels of integration of real-time, safety-critical applications continue to increase.

Norms such as IEC 61508 and ISO 26262 mandate more robust products and functional safety concepts in automotive and industrial applications.

Infineon’s PRO-SIL™ trademark designates Infineon

products, which contain SIL-supporting (Safety Integrity Level) features. The SIL-supporting features are intended to assist the overall system design in attaining the desired SIL (according to IEC 61508) or A-SIL (according to ISO 26262) level for safety systems with high efficiency. Products with the PRO-SIL™ label will help you to select Infineon products for safety-relevant (automotive) systems.

More information on PRO-SIL™ can be found at www.infineon.com/prosil

2GO evaluation kits

Smallest, fully featured sensor 2GO evaluation kits for current, low-cost rotational speed and 3D magnetic sensors, joystick adapter and rotation knob for the 3D magnetic sensor 2GO

Infineon's sensor 2GO kits are new budget-priced evaluation boards that are already equipped with a sensor combined with an ARM® Cortex®-M0 CPU. The sensor 2GO kits provide a complete set of on-board devices, including an on-board debugger. Build your own application and gadget with the sensor 2GO kits. Our 2GO kits are ready-to-use plug-and-play boards.

Benefits

- > Plug-and-measure evaluation board
- > First measurements possible within minutes
- > Mechanical adapter (joystick/rotation knob) available for quick evaluation

Joystick adapter for the 3D magnetic sensor 2GO features

- > In addition to the 3D magnetic sensor 2GO evaluation kit, Infineon also offers the new joystick adapter, which can be easily mounted on the evaluation board
 - Easy mounting on the 3D magnetic sensor 2GO
 - First magnetic joystick measurements within minutes
- > The user manual in the download area precisely explains usage, mounting and functionality

Rotation knob for the 3D magnetic sensor 2GO features

- > Rotate and push button control element
- > Simulates rotational and angle sensing movements
- > The user manual in the download area precisely explains usage, mounting and functionality

3D magnetic sensor 2GO features

- > TLV493D-A1B6 (three-dimensional magnetic sensor)
- > XMC1100 (ARM® Cortex®-M0 based)
- > On-board J-link lite debugger (realized with XMC4200 micro-controller)
- > Power over USB (micro USB), ESD and reverse current protection
- > GUI for free download

Current sensor 2GO features

- > TLI4970-D050T4 (current sensor with digital interface)
- > XMC1100 (ARM® Cortex®-M0 based)
- > On-board J-link lite debugger (realized with XMC4200 micro-controller)
- > Power over USB (micro USB), ESD and reverse current protection
- > GUI for free download

TLE4922 features

- > Budget-priced evaluation board for speed sensing
- > Complete speed sensor incl. back-bias magnet, fixing and cable
- > TLE4922 (active mono cell Hall sensor)
- > XMC1100 (ARM® Cortex™-M0 based)
- > On-board J-Link Lite Debugger (Realized with XMC4200 microcontroller)
- > Power over USB (Micro USB), ESD and reverse current protection
- > GUI based tool for real in-application evaluation for free download

Making life smarter, safer and greener

Our simulation tools will guide you in identifying the most suitable Infineon sensor IC combined with the best-fit magnet

The magnetic design tool for 3D magnetic sensors

- › Covers some typical applications which can be addressed with 3D magnetic sensors:
 - Angle measurement (rotational movement of the magnet)
 - Linear position measurement (linear movement of the magnet)
 - Joystick (3D movement of the magnet)
- › The tool provides pre-defined or user-customized magnets for each of the three applications
- › The tool automatically calculates the three magnetic field components at the sensor location.
Calculation is based on the sensor arrangement defined by the user.
- › Direct link to the 3D magnetic sensors simulation tool:
<http://design.infineon.com/3dsim/>

The simulation tool for Hall switches

- › A highly efficient and easy-to-use way of simulating Hall switch applications
- › This results in an accurate simulation of the magnetic field and the switching behavior of the Hall switch in the application
- › Position detection with Hall switches can be optimized on magnet parameters, magnet-to-sensor distance and Hall switch parameters
- › Capable of downloading the simulation results, simulation parameters and datasheets
- › Direct link to the Hall switches simulation tool:
<https://infineon.transim.com/Halldesk/pages/appfinder.aspx>

The magnetic design tool for angle sensors

- › Designed to support xMR-based angular sensors and diametrically magnetized disk magnets
- › Calculates the valid distance from the magnet surface to the sensor and the assembly error, given certain parameters:
 - Magnetic properties
 - Sensor specification
 - Assembly tolerances
- › Direct link to the angle sensors simulation tool:
<http://sensors.your-infineon.com/index.html>
