

2.4mm NMD Female to 2.4mm Male Precision Cable 24 Inch Length Using High Flex VNA Test Coax

# **RF Cable Assemblies Technical Data Sheet**

## Configuration

- Connector 1: 2.4mm NMD Female
- Connector 2: 2.4mm Male
- Cable Type: PE-VNA-HF

### **Features**

- Max Frequency 50 GHz
- Shielding Effectivity > 100 dB
- 78% Phase Velocity
- Triple Shielded
- Designed for use as VNA test port extenders
- Highly flexible armored cable construction
- 1.40:1 VSWR to 50 GHz
- · Excellent amplitude and phase stability with flexure
- Non-conductive protective Nomex outer sleeve
- · In-stock and ready to ship same-day

## **Applications**

- General Purpose
- Laboratory Use

 Vector Network analyzer test port extenders

Semiconductor probe testing

- Precise bench-top testing
- Lab and production testing

#### Description

Pasternack's PE3TC0660-24 2.4mm NMD female to 2.4mm male 24 inch cable using high flex VNA test coax is part of our full line of RF components available for same-day shipping. Pasternack's flexible RF cable assemblies are ideal for applications where tight bends and flexure are required. This Pasternack 2.4mm NMD to 2.4mm cable assembly has a female to male gender configuration with 50 ohm flexible PE-VNA-HF coax. The PE3TC0660-24 2.4mm NMD female to 2.4mm male cable assembly operates to 50 GHz. The triple shielding of this Pasternack cable assembly provides excellent shielding effectiveness of better than 100 dB. Pasternack high performance high flex VNA test cables are designed to provide customers repeatable and accurate VNA measurements. These Test cables have excellent electrical properties including low Insertion Loss, low VSWR and phase stability of +/- 6° with flexure. The braided stainless steel armoring provides a rugged, but flexible cable with a life exceeding 100,000 flex cycles. The rugged connectors provide up to 5,000 mating cycles when attached with proper care. The flexibility of these cables makes it easier and safer to test your Device Under Test (DUT). When used with the appropriate calibration kit, these test cables effectively extend the test port of the VNA allowing for accurate measurements of devices that cannot be directly connected to a network analyzer test port.

Custom versions of most RF cable assemblies can be built and shipped same day. Custom cable assembly lengths can be obtained by specifying the desired length on the web site at time of order or by contacting a sales representative. Other available RF cable assembly value added services include connector orientation or clocking, heat shrink booting and custom labeling. RF testing can also be performed to document the electrical performance of your cable assembly.
